Microsoft

Compare Microsoft 365 to other leading enterprise social tools

Considering another enterprise social tool because it looks and works like a familiar consumer app? Here are a few reasons why Microsoft 365 alone is a better choice for your business.

Microsoft 365 empowers every employee from your firstline workforce all the way to your boardroom. All our subscriptions offer complete, intelligent and secure solutions to run your business, and features some of the latest social technologies.

If your company is looking to use social platforms to break down communications barriers, encourage knowledge sharing, easily connect leaders and build company culture, then look no further than Microsoft 365.

Social + Everything else your organization needs

Video and social alone are not enough to connect people. Microsoft 365 subscriptions provide a complete vision for driving employee engagement through video broadcasts, social communities, teamwork hubs, company portals and much more.

Social + A seamless experience to keep teams productive

Other social tools lack many of the productivity tools to get work done Only Microsoft 365 subscriptions come with these built-in to create, store and manage documents, notes or tasks so people can collaborate and share knowledge while they get work done.

Social + More for firstline workers

While other social tools may offer chat and social sharing for firstline workers, they often don't go beyond those capabilities. Specially-tailored Microsoft 365 plans help you make the most of your firstline workforce with a complete toolkit to communicate, share and manage work.

Social + Trust that your data is secure and compliant

Consumer-based social tools lack transparency around how they handle customer data collection and rely on 3rd parties to address security needs. Microsoft 365 offers industry-leading commitments and built-in tools to help you with privacy, security, compliance and transparency.

Why Microsoft 365 is the best option for your enterprise social tool
