Professional Software Services

QAAS

A customizable assessment and accreditation system is becoming an essential tool for development, due to the quickly evolving competitive market

Challenges

- Keeping track of university improvement process
 - Compare the University status with the accredited standards
 - Tracking the overall performance of the university
-
- Universities' feedback complaining of high expenses and losing time in quality assessment projects.

Ideal Solution

- User friendly interface & KPIs
 - Keeping track and record of all the changes and compare them to predefined standards
 - Helps in making key decisions to improve the university behavior
-
- Archiving for evidence.
 - Speeding up and organizing accreditation process.

Desired Outcomes

- Better strategic planning.
 - Improve the performance and help in accrediting the university or institute.
 - Better analysis of the weakness and defects to be avoided.
-
- Strong and organized reports for assessment and accreditation standard with organized evidence.

IT-BLOCKS: Quality Assessment and Accreditation System (QAAS)

IT-BLOCKS
Professional Software Services

QAAS enables institutions and organizations to self-evaluate their performance against their industry's standards or against industry benchmarks

Improved organizational alignment & communication

- Common language
- Common set of strategic objectives
- Common metric structure

Better strategic planning

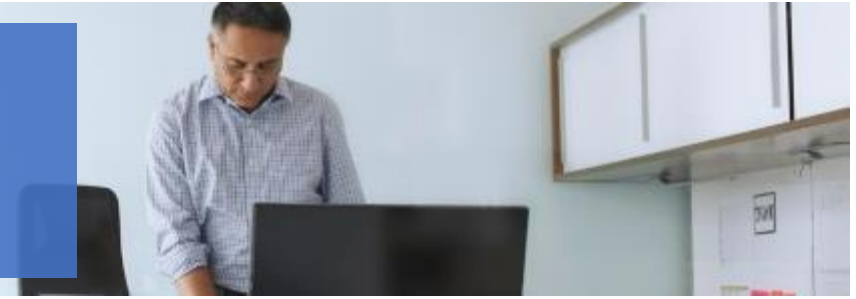

- Create Initiatives to improve performance as well as monitor their progress and change.
- Manifesting the "Cause and Effect" concept that separates the Balanced Scorecards solution from other performance management systems

Improved performance reporting overall

- Detailed performance and achievement reporting on the Department level as well as on the organization level to give a holistic view of decision makers

QAAS helps comparison with other benchmarked institutions and/or programs in addition to trending comparisons between one's self to show improvement or degradation of performance

IT-Blocks: QAAS + Microsoft .Net/SQL Server

IT-Blocks used Microsoft Development Technologies .Net for development and SQL Server for the Database; through which QAAS developed and presenting a user friendly interface to its users as universities and any educational institutes especially for the "Quality Assessment Teams".

Solution Alignment

QAAS + .Net

- Security
- User authentication
- Administration Support and maintenance

QAAS + Microsoft Active Directory

- Single sign on
- Map Organization chart
- Personalized security
