THINK. CREATE. SHARE.

Kollaborate like a Pro!

KALSOFT
enabling business agility

Transforming business processes to collate their documents into an electronic management system can result in huge investment for an organisation, both financially and time. Despite this investment, major businesses fail to either implement the solution or end-up creating something that is not functional.

Kollaborate365 is a bespoke solution built on Microsoft Technologies – SharePoint Online, Office 365 & Azure and uses best practices to enable digital transformation for businesses in a very short amount of time. It can seamlessly integrate with Office365 solutions like OneDrive, Yammer etc. so that business users can continue working on their preferred applications at ease.

Robust Document Management System

Perfect for Internal Communication within Organization

User Friendly & Secure

Data Security & Access Control

- Enable user or group based security to secure documents and sites throughout the intranet portal
- Kollaborate365 is based on Microsoft technology so it follows Microsoft security protocols.

Integration & Customization

- Ability to integrate with your current tools and the scalability of adding new tools
- Web parts can be used to create custom modules which can make interaction easier with the site.

Quick Deployment

- Deployment of a document management system is easier than you may imagine, so there's no need for concern over losing valuable time during the transition.

Document Repository

Anytime, Anywhere Access

Workflow Automation

"KalSoft with its expertise on Microsoft technologies is an outstanding combination of fulfilling the customer's need on time."

Abu Bakar Al Balushi – GM IT, Salam Air
