

ZenCity Community Analytics

ZenCity is a platform that helps cities understand their residents on a wide scale. With the use of advanced AI algorithms, we analyze data from social media, 311, CRMs, local news sources, and many other channels, to provide local government leaders with a detailed, ongoing vision of the needs and preferences of their community.

ZenCity's cutting edge AI technology recognizes topics, trends and sentiment across all of the data sources aggregated. ZenCity's advanced technology was recently recognized when the company was chosen by Microsoft as one of the most innovative AI startups, awarding it a 1M\$ investment.

After less than a year of marketing, ZenCity is currently working with over 25 cities including Arlington TX, San Francisco, CA, Fort Lauderdale, FL, and Tel Aviv, Israel.
