

# Disaster Recovery as a Service for SAP on Azure

SAP HANA Disaster Recovery offering with Pay-As-You-Use payment model for SAP Customers.

**What would you do if your most important system went down tomorrow?**

**Would you be able to work without your most important server? Would employees?**

**What is «DRaaSAP»?**

This service is intended to leverage the Cloud flexibility to provide Disaster Recovery and so Business Continuity for your mission-critical systems. During continuous replication 1/4 of your Productive System will be located on Azure and then immediately scaled-up to Productive size in case of a disaster.

## Value Proposition for SAP Customers

- Lower TCO with 1/4 cost for DR system during replication
- Automatic scale-up during DR
- Scale-up up to 20TB without investment
- ASR for Application Servers

## How we achieve values?

- Using minimal resources during continuous replication to lower TCO
- Automatically scale-up to the size of Productive System to provide same performance and comfort to end users.
- Leverage ASR for other application servers replications

## Why customers use «DR as a Service for SAP as a Service»?

- You don't need to build or manage a secondary site
- No extra I.T. resources needed to manage or test
- Leverages cloud and economies of scale
- Variable RPO down to 15 minutes with application-level consistency

## Impacts for SAP Customers

- Convert CAPEX to OPEX and save dramatically on DR
- Variable RPO down to 15 minutes with application-level consistency
- Ability to view and test servers and data on production cloud infrastructure.

«Lorem ipsum dolor sit amet, consectetur adipiscing elit. Quisque aliquam ante eu massa pharetra facilisis. Praesent dui odio, vehicula ut dui quis, facilisis iaculis dolor. Cras auctor dui ligula, a venenatis erat fringilla sit amet. Donec hendrerit felis quis lorem venenatis, vitae consequat leo bibendum.»

OUR EXPERIENCE  
GIVES YOU SUPPORT!

# How it Works?

## Architecture Design

- Collect customer requirements
- Design Azure infrastructure
- Create DR deployment plan

## Deployment

- Deploy SAP HANA replication systems if platform is SAP HANA
- Deploy ASR for other systems
- Test disaster replication, failover and rollback

## Continuous Monitoring and Tests

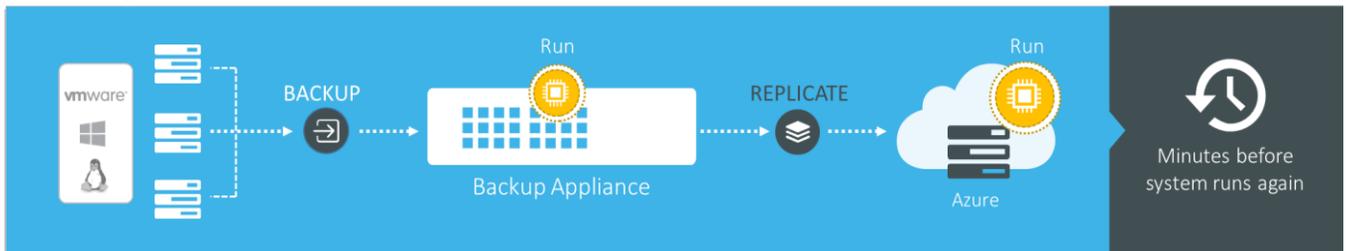

- Monitor replication on daily basis
- Annual DR scenario tests
- Support during real disaster

## SAP DR as a Service for SAP on Azure

Enjoy the confidence of your very own disaster recovery team, with personalized service to ensure you're prepared in case of emergency.

### An offer to get you started

- Your Business Continuity project
- No extra I.T. resources needed to manage or test.
- Lower disaster recovery costs.

## CoreToEdge DRaaS

- We have the infrastructure, tools and solutions.
