

# Data Analysis Software

All Your Data In One Database For Search & Analysis

**DataWalk enables you to link all your data in one database, and then quickly find patterns, anomalies and bad actors across your many data sources, through link analysis, visual querying, and geospatial analysis.**

## DataWalk

DataWalk is a collaborative, multi-user software platform for data analysis. DataWalk enables you to quickly connect all desired data sources, and search and analyze that data through intuitive visual interfaces.

## Why customers use DataWalk

- Enable intelligence-led decision making
- Accelerate both reactive and proactive analyses
- Easily connect and analyze ALL your data
- Access data from external sources and services, and link with your internal data
- Enable both analysts and agents/officers in the field to access and analyze data

## Get Results Up To 10X Faster

- All your data, connected in one database for search and analysis
- Fast results, even with billions of records
- Use your data the way it is; no need for data owners to first clean their data.
- Quickly deploy and quickly scale

## Get Better Results

- Easily integrate and utilize all desired internal/external data and services
- Repeatable results
- Generate powerful risk scores with a few clicks
- Instantly create, modify and retrieve rules and scores

## A Fraction The Price Of Alternative Solutions

- Software price up to 80% less than alternative Enterprise-class systems
- Minimal need for extensive professional services
- Predictable costs
- If desired, add and connect new data sources yourself, instead of relying on professional services

***"DataWalk has been just fantastic for us. It's amazing what its able to connect and process. Extremely easy to use. It's a system I'd highly recommend to any of my peers."***

- Jay Lanham, Executive Director, Northern Virginia Regional Gang Task Force

# How DataWalk works, to achieve business benefits

## Key Capabilities

- Instantly generate link charts without the overhead of data preparation
- Create, modify, and retrieve rules, analyses, and scores in just seconds, via a simple visual interface
- Highly granular security controls ensure each user only sees the data you want them to see
- Geospatial analysis enables you to see “where” in addition to “who and what”
- Automatically identify organized crime groups via cluster analysis

## Customer Example: Warta

- European insurance company
- Anti-fraud application
- Pilot project: start to finish in two weeks
- Increased fraud detection rate 11% in ten days
- 60% increase in fraud prevention effectiveness

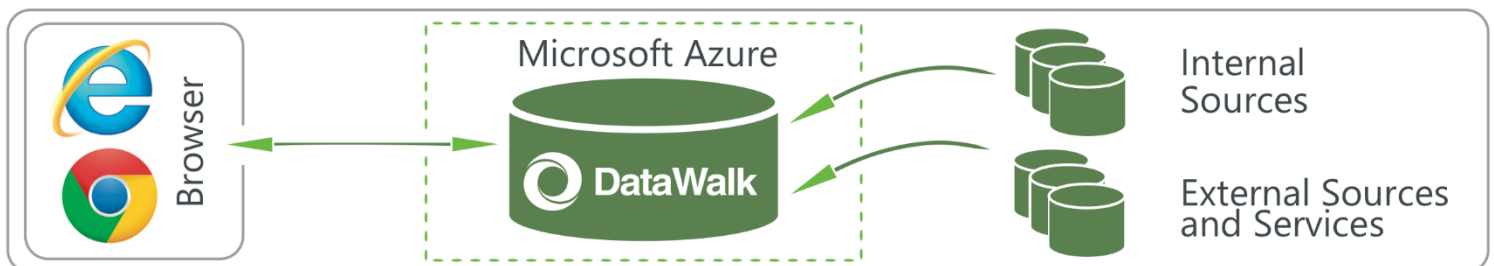

## Our promise to you:

See First Results in Days!

## An offer to get you started: Three-Day Proof Of Concept

DataWalk on Microsoft Azure is a flexible system that provides you with remarkable agility. This enables you to quickly deploy the system, integrate your data and get results:

- From zero to results, in a few days or even a few hours
- See real results using YOUR data
- DataWalk engineers work with your analysts onsite
- Microsoft Azure eliminates any “hardware hassles”

## Key Benefits

- Accelerate both proactive and reactive investigations
- Provide actionable intelligence
- Support investigations in the field
- Find the secrets hiding in your data!

## Why DataWalk?

Only DataWalk provides a collaborative data analysis solution that is fully integrated, able to handle large volumes of any type of data, quick to deploy, and reasonably affordable. To learn more, visit [datawalk.com](http://datawalk.com).
