RDX™

Running Oracle Workloads on Azure

RDX's Oracle-as-a-Service in Azure uses a proven DBaaS technology to deliver a secure, performance-rich experience with full HA while enabling customers to manage their infrastructure cost and performance. With the click of a mouse, imagine spinning up an Oracle database in only minutes, increasing or decreasing compute or storage to match demand in real-time, and starting, stopping, and deleting services. The service incudes DBA expertise to run Oracle applications with your existing licenses (BYOL), cost effectively, and reliably on the Azure Cloud.

Why choose RDX?

- Real-time cost & performance management
- Leading DBaaS Automation
- Cloud operations expertise
- HA & Disaster Recovery
- World Class Oracle DBAs
- 24/7 Customer Support
- Security & Compliance
- Proven delivery model based on ITIL

Gold Microsoft Partner
Microsoft

ORACLE Silver Partner

DBaaS Automation

- Spin up or scale Oracle DB services in real-time
- Start, stop, delete instances or schedule for shutdown periods
