thoughtonomy®

The Thoughtonomy Virtual Workforce®

// Beyond RPA

// What is the
Virtual Workforce

// The last Intelligent Automation platform your business will ever need to buy!

1500%
Increase in Productivity

The Thoughtonomy Virtual Workforce® delivers automation of the widest range of business processes from front to back office, combining traditional Robotic Process Automation (RPA) and Intelligent Automation tools, with the power of Microsoft Azure Cloud deployment, to deliver a step change in company productivity. With a Virtual Workforce you are able to automate any process, any system and utilize automation on-demand, anywhere in your business.

Underpinned by the power of the Cloud, Software Robotics and Artificial Intelligence, the Virtual Workforce emulates the actions of human workers within any system or application, providing you with infinite improvement to productivity and service.

Unlike a human worker, Virtual Workers provide an on-demand, scalable pool of labor that can be deployed across multiple business functions as needed. In doing so, they only require one round of training and are guaranteed to always follow best practice. What's more, the Thoughtonomy Virtual Workforce® is built on an 'evergreen' approach — ensuring you will always have access to the latest technology and functionality available with no shelf life on your investment. Creating a future proof platform with continued improvements deployed non-disruptively via SaaS architecture.

Why are companies choosing Thoughtonomy?

// Enhance Cost-Effectiveness

· Scale your Virtual Workforce up and down as needed to always be delivering maximum efficiency
· Return up to 30% of human workforce hours back to the business
· Mistakes can be expensive. Never make one again.

// Transform Digital Ops

· Transform and modernize your legacy systems and applications without risk or additional infrastructure investment
· Create an agile platform that facilitates technological growth
· Create an omni-channel business and avoid ever having to rekey data again

// Maximise Productivity

· The Virtual Workforce can provide around the clock service
· Virtual Workers make no mistakes and will always follow best practice
· Minimise the administrative strain on your employees and allow them to focus on value-added and creative tasks

Multi-Award Winning Platform including CRN, NTA & FS Tech

// Future proof platform with frictionless cloud deployment

// Artificial Intelligence

Far from being another standard Robotic Process Automation (RPA) solution, the Thoughtonomy Virtual Workforce® comes armed with an advanced cognitive edge. This means that not only can your workers process structured data but also unstructured data and processes using advanced AI, machine learning and natural language functionality in a single platform.

// Robotics

From the launch of an application right through to data entry and synchronization, Software Robots behave in the same way a human would when navigating their way through both internal and external applications. The only difference is that they do so significantly more efficiently and without any mistakes and can scale activities to meet business demand.

// Cloud

By harnessing the capabilities of the Cloud, The Thoughtonomy Virtual Workforce® can be deployed anywhere with an internet connection and can be adopted with no additional infrastructure costs. Virtual Workers slot in alongside your existing systems non-disruptively, utilising any existing or future applications or interfaces and supporting growth.

// Orchestration

The brain of the platform, known as IADA® (Intelligent Automated Digital Assistant), manages the execution of work at machine speed. IADA® works out; what is required, how best it can be achieved in line with business service levels, monitors performance to ensure processes are being carried out correctly – all with guidance on the optimal time to execute.

100%
Reduction in human error

300%
ROI

"I thought intelligent RPA was just an overplayed sales pitch... this technology absolutely delivers, and I am very excited about what we have planned"

// Darren Atkins, Deputy Director of ICT, ESNEFT

thoughtonomy®

Thoughtonomy, the leading Intelligent Automation platform provider, helps organizations to improve efficiency and productivity, by combining the principles of Cloud Computing, Software Robotics and enhanced Artificial Intelligence functionality to provide a platform for the digitization and automation of processes. This advanced capability enables the technology to understand, interpret, translate and structure information, as well as interact with humans in natural language and optimize workflows, 24 hours a day, and without error.

Thoughtonomy was founded in the UK in 2013 and now works with over 200 clients in 28 countries. With offices in London and Manchester in the UK, and New York and Austin in the US the company has significantly grown its workforce to nearly 100 employees globally.
