

GDPR: What is needed to protect natural persons rights and freedoms?

The new privacy regulation, GDPR, has modified personal data processing since it came into effect on May 25, 2018. Companies are called to take a proactive approach to oversee information related to natural persons. It is now required to carry out information process risk assessments, identifying and implementing suitable technical and administrative measures to minimize occurrence probability and impact.

Irion GDPR Suite is a complete, integrated and flexible solution

It guarantees a response for the necessary fulfilment of GDPR adaptation protection to personal data. Running on company servers or the cloud, it complies with regulatory requirements while simultaneously enabling all benefit capitalization deriving from an organized management of corporate information assets.

Metadata driven

The aim is to document correctly and show that proper data governance has been set up in line with individuals rights and freedoms, in order to manage informative assets and avoid any findings and penalties as well as adopting a structured approach to turn regulatory obligation into competitive advantage in a world where data has truly become a valuable asset.

A single platform for business people and IT specialists

Optimal implementation

In order to optimize the required processes that ensure regulation compliance, a logical process sequence is suggested to manage required task dependencies and business aspects. To guide companies through this path, Irion's offer is structured into modules addressing one or more regulatory requirements fully complying with information consistency, segregation of duties and regulations.

An integrated and synergic vision for GDPR adoption processes

Future-proof

The solutions developed with Irion EDM platform are solid, robust, performing and capable of processing very large volumes of data.

Irion guarantees over time full functionality of applications developed with previous versions, without expensive port operations.

We protect and increase you investment value

We successfully manage GDPR regulatory complexity, which requires a progressive design approach thanks to the flexibility of the Irion platform and the data model.

- Emanuele Coletto, Data Protection Officer, BCC Roma

Irion Enterprise Data Management and Microsoft Azure

Innovative, unique proprietary technology

Isodata™, DELT™, EAST™, Datashelf™ proprietary technologies aid agile projects and declarative solutions implementation.

Business professionals, data scientists and IT collaborate in a single EDM environment, each using specific tools.

Performing

Irion is an enterprise-class data management suite designed to handle large volumes of data. The Declarative Extract Load & Transform (DELT) technology automatically and dynamically implements efficient execution strategies.

In addition, Irion is optimized to take full advantage of Microsoft's performance capabilities.

Flexible and scalable

Do you need more power? Microsoft Azure cloud guarantees all the resources you need such as physical space and computational power, if and when you need them.

Irion's full suite and Microsoft services available on Azure provide everything you need to manage data, structured or not, as well as simple and complex problems.

Recognized value

Eight of the top ten Italian banking groups use Irion to manage information assets.

Irion is installed on Microsoft Azure through multiple companies.

Reliable technology

200+ new features added last year.

€3m+ invested in R&D in the same period.

We care about your investment: solutions implemented with the first version of Irion continue working with new releases without the need for expensive migrations.

Exploit data advantage

- A single EDM platform where business users, data scientists and IT specialists work together to extract maximum value from corporate data.
- Agile, Declarative, Future-proof features mean faster, better and long lasting results.
- The flexibility and scalability guaranteed by Irion on Azure allow you to adapt your investments in functionality and technological resources to current needs and plan them over time.

About Irion

Irion was founded in 2004 by three partners, each with sound experience in the financial solutions world. Today, Irion is highly qualified in the world of data management. Irion develops Irion EDM, an all-in one innovative platform for Enterprise Data Management solutions to help customers in extract true value from certified data.
