worXsmart.io

Workflow Enforcement for Retail & Facility Maintenance

Business Case: Using connected devices to provide insight into mission critical workflows. Increase efficiency, productivity, and accountability of workers and managers.

Device

worXsmart.io is a device-agnostic workflow enforcement software platform. The platform currently supports occupancy sensors, temperature sensors, Bluetooth beacons, and UWB indoor tracking technology, with more being on-boarded each quarter.
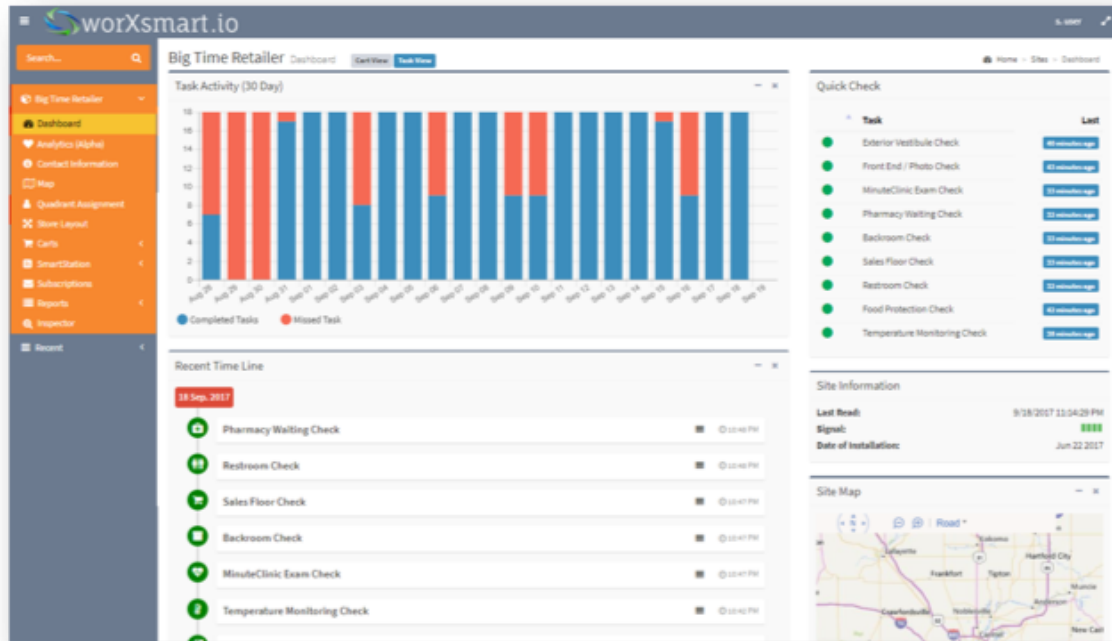

Cloud Solution

State machines and smart contracts powered by customizable schedules of prescribed workflows and processes. Blockchain component is forthcoming.

worXsmart.io represents the intersection of IoT **data**, important **workflows**, and the **people** who get things done.
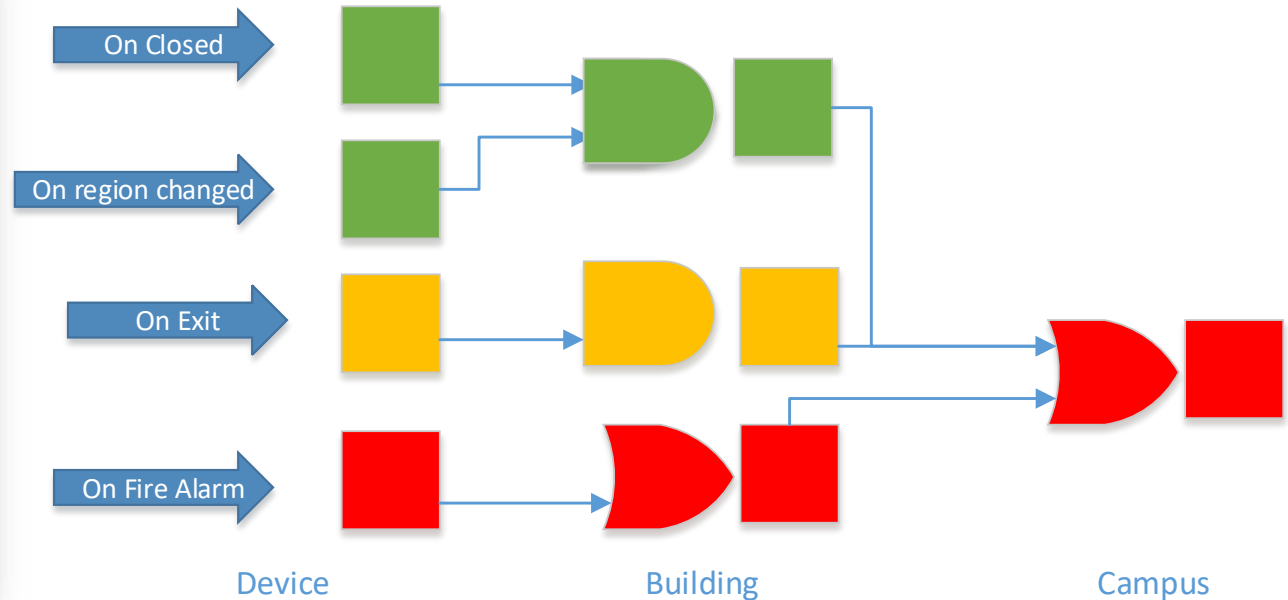

worXsmart.io – Web Portal and Architecture

On Closed

On region changed

On Exit

On Fire Alarm

Device　　　　Building　　　　Campus

Manage prescribed workflows in aggregate across all of your locations from the cloud-based web portal.

Track in real-time the completion of tasks. Create new tasks and assign them to the proper employee.

Any number of tasks can be assigned to a site. Task hierarchies can color a site as 'All Green,' 'In alert,' or 'In alarm.'
