

Vexor.io

Vexor.io – cloud continuous integration service with unlimited resources and pay-per-minute billing model.

Vexor can run unlimited number of parallel builds because it works in the cloud. When a lot of commits are pushed in a short time you won't have to wait in the queue. Tests are executed in parallel in each build. This way we make your testing faster.

One of our customers had 6100 tests run on the local machine for 70 minutes. Vexor allowed to parallelize those tests in 6 threads so now they take 12 minutes. Even if the developers of that customer make 10 pushes in a row on Friday afternoon we run builds and tests in parallel and no one would have to wait.

You pay for the minutes of testing. Our customers aren't afraid to make tests parallelized with Vexor because they shouldn't pay for idle servers.
