EDUCATOR'S CHALLENGES ON EMERGENCY CARE

Combination of theory, simulation pedagogy and practical training

Modern emergency care education is very practical and implemented in close cooperation with the working life. Part of the training is carried out in simulation learning environments where it is possible to practice patient care before moving on to training with real patients. Paramedics must have abilities to cope with stress and operate under pressure. Therefore the practical training as a member of an emergency care team is the most effective way to learn the required expertise and safe operating methods.

Lack of continuous assessment is pain point on practical training

Typically one third of the study program is training. Training periods are from 4 to 8 weeks during which the student is supervised by an emergency care expert. Often there are three appraisals between the student, teacher and the instructor. The process is managed traditionally by paper-based practices which has many drawbacks:

- Students are less motivated to report daily activities and to make self-assessments. Lot of useful information is never documented.
- Teachers are lacking visibility to student's abilities and suitability for the profession.
- Non-digitalized process is inefficient with large student groups.

WHY CHOOSE WORKSEED FOR EMERGENCY CARE EDUCATION?

Easy way to deploy competence centric training process

Cloud based solution for managing critical study modules' competence requirements and personal learning objectives. Freely definable professional training paths for groups and individual students. Easy to use in the field on any mobile device.

Scalable - many integration options

As Workseed can be scaled up to manage learning and assessments in all learning environments for example skill tests, simulator and online learning, the solution is a future proof investment. Workseed offers many integration options with the school administration systems and on-line learning environments (for example Moodle and Google Classroom).
