

Microsoft's Workplace Analytics delivers many powerful insights on how staff are working and collaborating by analysing email and calendar metadata in Microsoft Office 365.

**By adding TransVault WpA-Sync to their environment, hybrid organizations can get valuable, actionable insights across their entire workforce, *not just that part of the organization that has transitioned into the cloud.***

### Key features

- Unbeatable performance
- Secure, end-to-end transfers over HTTPS
- Simple, automated deployment
- Optional support for archived content
- Full control over what gets synchronized
- International language support

### Key benefits

- Zero impact on your network & email servers
- Minimal administration
- Supports the most complex environments
- Helps meet compliance & GDPR needs

### Extend your analytics reach

Migrations to Office 365 can often take several months to complete. Indeed, certain parts of your organization may need to remain hosted on-premises for the foreseeable future.

With TransVault WpA-Sync, you can capture on-premises Exchange mailbox and calendar activity and make it securely and seamlessly available to the cloud-based Workplace Analytics application.

### Get historic insights & trends

By reviewing data and metrics that relate to staff whilst working on-premises, and continuing to do so once they've been migrated, WpA-Sync enables Workplace Analytics to provide valuable 'before and after' information.

This additional 'pre-migration' data means you can accurately assess the impact of Office 365 on staff productivity and working practices.

### Maintain privacy & compliance

With TransVault WpA-Sync you can redact and filter what gets synchronized (e.g. exclude subjects, body, attachments, etc).

And, as data is synchronized into Workplace Analytics, WpA-Sync delivers secure HTTPS, one-step, end-to-end transfers with full chain-of-custody, encryption and optional audit reports.

This helps meet stringent legislation relating to the handling and protection of sensitive data, including the EU General Data Protection Regulation (GDPR).

### Zero network impact

WpA-Sync delivers superior performance and includes scheduling policies that enable operation outside of core hours to minimize impact on Exchange servers and your network.

### Multi-lingual support

Support for synchronized data in Unicode format ensures Workplace Analytics can correctly process many different languages.

### 'Set and forget it' operation

TransVault WpA-Sync is delivered as a managed service. Full workflow automation eases user and license administration, with auto-deletion of synchronized data and auto-assignment of Workplace Analytics licenses as soon as users are moved into Office 365.

A web dashboard provides synchronization status updates and identifies any issues.

### Pre-requisites

TransVault WpA-Sync requires a hybrid Exchange 2007+/Office 365 environment synchronized with Azure Active Directory using Azure AD Connect. Exchange mailbox impersonation permissions are also required.

## About TransVault

Since 2007 TransVault has led the market with its highly specialized email migration solutions for the enterprise.

When businesses encounter technological change brought on by a merger or acquisition, make a strategic shift to the Cloud, or face the obsolescence of their archive or storage solution—they turn to TransVault and its partners to preserve accessibility to their business records.

Over 1,750 customers from around the world have relied on TransVault to protect the integrity of their valuable legacy data whilst ensuring chain-of-custody, faultless eDiscovery and seamless user accessibility—no matter the complexity of the migration, nor the platform.
