One Platform
SYNERGY provides a complete HoloLens suite for frontline workers and experts.

Scenario Creator
Create and edit Augmented Reality SOPs where the work is actually being done. By adding spatial information to the steps in the SOP the frontline workers are more likely to understand and follow the SOP correctly. Add picture, videos, text, PDFs, voices, indicators and 3D models to create an informative and easy to use SOP or guide.

IoT Dashboards
Display IoT data where is being generated in beautiful holographic data dashboards with a great overview and get the understanding of the data that matters to you.

Remote Assistant
On remote locations, this can take significant time before an expert can be present on-site. This is solved by offering the expert full insight into the IoT data remotely as well as video and VoIP voice chat with the frontline worker.

Business Value
- Improve effectiveness and efficiency of field maintenance and operations.
- Minimize travel and time expenses by connecting frontline workers with remote experts.
- Huge time and resource savings on producing manual SOP and check lists.
- Lower risks for mistakes, failures and here offproduction/ installation downtime.
- Lower risks for human injury.
- Provides immediately overview of installation/production on- or off-site for decision makes and experts.
- Empowers and guides new employees, substitutes and non-experts to work independently and not feel insecure for making mistakes or straining the workflow.

Benefits
- Hands-free access to real-time and time-series data of IoT devices.
- Improved communication between frontline workers and remote Experts.
- Empower experts to create AR versions of SOPs and check lists to be reused by frontline workers.

Supported devices
- HoloLens 1
- HoloLens 2
