

Overdrive Basic Fleet Management System

For instant visibility and control to your fleet operations

What is Overdrive?

Overdrive is a true IoT (Internet of Things) platform that manages the information flow from a multitude of sensors, ranging from complex machines such as an automobile to a simple mobile device. From our cloud platform, we gather information from various sensors and analyze the data to build smarter applications.

Gain visibility and control of your fleet operations with ease using Overdrive Basic Fleet Management System. Import the data into your operations and see instant results.

Why customers use Overdrive platform

- Holistic approach
- Seamless integration with enterprise solutions
- Reliable
