Hosted~FTP~

FTP in the Cloud ™

For over 40 years FTP has provided secure file transfer services. Today, everyone uses FTP. Here are the main issues related to security, reliability and ease of use that you should consider when choosing your FTP service:

	HOSTED~FTP~	In House FTP
Secure		
NETWORK SECURITY	**HOSTED SOLUTION** Our service is 100% Cloud, removing any chance of your network being compromised.	**EXPOSES YOUR NETWORK** Your network will be open to the public, which is why most corporate firewalls block FTP outright.
ENCRYPTION	**STRONG ENCRYPTION** Files are encrypted when uploading and download, all communications with our servers are encrypted.	**NONE** No encryption, usernames and passwords are also sent "clear-text" and can be easily compromised.
PRIVACY	**FULL CONTROL** No users can access files they shouldn't. This privacy protection is at the heart of our secure file sharing service.	**NONE** FTP does not keep users' files private from one another unless you continually manage your installation.
Reliable		
COST	**PAY AS YOU GO** Our pricing model lets you use what you need, and pay for what you use.	**HIDDEN COST NIGHTMARE** Servers, maintenance, upgrades, hard drives and daily backups are the big hidden costs of FTP.
NOTIFICATIONS	**EMAIL NOTIFICATIONS** Email notifications are sent when shared files are accessed, or when files are uploaded.	**GUESSWORK** There is no way to know whether files you share have been received, or when files are sent to you.
Easy to Use		
NO ADDITIONAL SOFTWARE	**STANDARD WEB BROWSER** File sharing on any operating system, requiring only a standard web browser. Supports all FTP clients.	**PROGRAM INSTALLATION** To receive files your customers will have to install and maintain an FTP program on their system.
ADVANCED FEATURES	**STANDARD, AND LOTS OF THEM** Drag and Drop, storage quotas, branding, mail attachments, online browsing and more...	**NONE** Basic FTP was never designed to be a collaborative file sharing service.

Our FTP service is a complete solution
When compared against hosting your own FTP service, Hosted~FTP~ is more secure, reliable and easy to use. To try it now, click here!

Want more information?
We're not alone in recommending that businesses abandon hosting FTP servers. Call us today at 1-855-888-4FTP (4387) to learn more!
