

Using the wisdom of the crowd, NanoNotion helps organizations to recognize, curate, surface, and magnify valuable knowledge

Powerful Features

- ◆ Surface information that is valuable to the organization
- 🏆 Turn knowledge into valued products or services
- 🏛️ Informal and social knowledge sharing
- ⚙️ Reward users for their contribution of informal knowledge
- 📊 Capture and measure institutional knowledge
- 🔗 Share and exchange ideas
- 📄 Validate reading of policies and procedures
- ★ Rapid employee onboarding

Leverage Microsoft Technologies and Applications

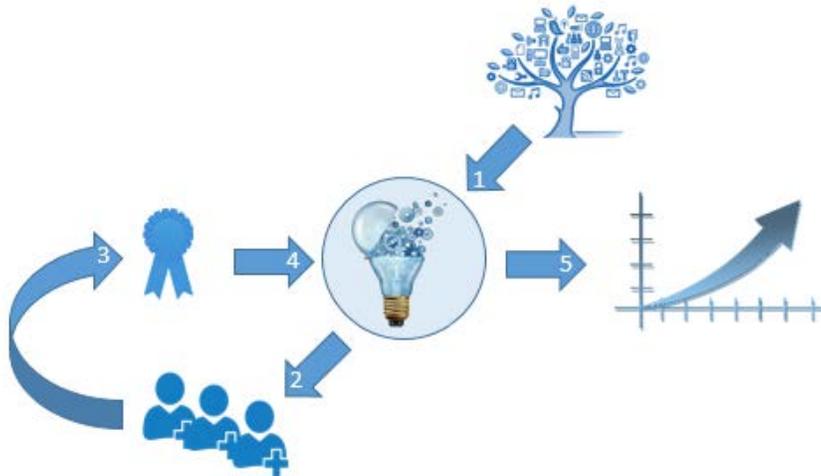

NanoNotion is a first of its kind, born on Azure SaaS application that takes advantage of Azure's infrastructure and scalability, Azure AD, Azure SQL, Azure and Office 365 Groups, API's, support for mobile devices, and much more.

Enhance the value of your Microsoft Office and Office 365 Application and Services investment

- ✓ Create Notions from a variety of Office 365 document types, including Word, PowerPoint, and Excel.
- ✓ Easily insert links that support a Notion from materials located on OneDrive for Business and SharePoint.
- ✓ Use Microsoft Teams to socialize Notions, which helps to surface valuable knowledge. Once knowledge has value, use Teams to help transform knowledge into products and services.

NanoNotion Process

1. Users contribute a Notion by associating its summary with supporting material from a variety of in-place sources such as SharePoint, OneDrive, and URL's.
2. The contributor then publishes the Notion so it can be shared and consumed.
3. Award points accrue for the contributor, sharer, and consumer as the Notion is socialized.
4. The visibility of the Notion increases as it is shared and consumed throughout the organization.
5. The best ideas surface, creating feedback and value to users and the organization.
