accessing the unlimited

# | in brief

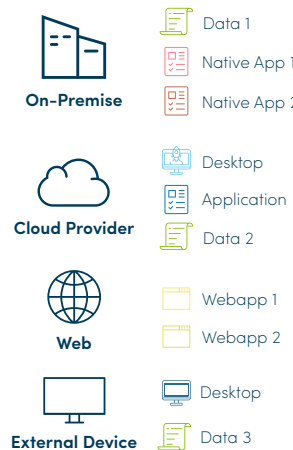

## This is oneclick™

oneclick™ is an immediately available Platform-as-a-Service (PaaS) for the provisioning of digital workspaces. Web apps, native applications, desktops and data are centralised in the platform and delivered securely to the users via streaming.

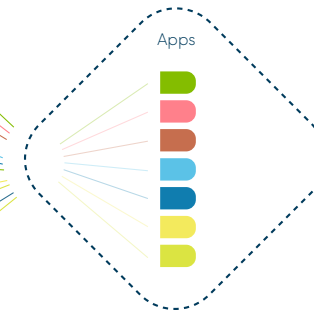

Since oneclick™ works 100% web-based, there is no need to install additional software components or plug-ins on servers or end user devices to access an existing target infrastructure. Additionally, with the oneclick™ Cloud Resource Manager, you can directly provide and easily administer virtual machines in the data centres of well-known IaaS providers.

## This is how oneclick™ works

### Individual IT Infrastructure

### Platform

### Individual Workspace

for Subsidiaries,  
Externals,  
Remote Work,  
Employees

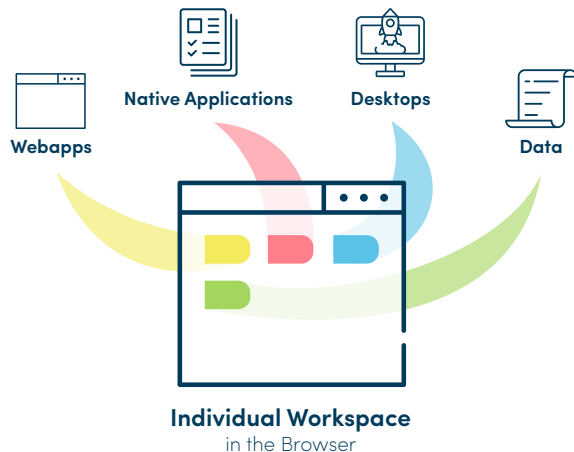

Stream

### In three steps to your individual workspace:

1. Connect any web app, native application, desktop or data from different server locations to oneclick™.
2. Assign complete desktops or individual applications to users.
3. Users can securely access their personal applications and data with any device.

### This is how Secure oneclick™ is

The oneclick™ platform is effectively protected from attacks through multi-layered systems. oneclick™ relies on the latest encryption technologies with streaming and ensures that applications and data will never leave the secure hosting location. Access is only granted to authorised applications and not the entire corporate network. The intelligent set-up of critical system components ensures high availability. The multi-level authentication as well as the rights and role concept ensure that only authorised users are allowed access to sensitive data.

## oneclick™ - the Digital Workspace with...

- ✓ Web App Delivery
- ✓ Application delivery
- ✓ Cloud Resource Manager
- ✓ Authentication incl. SSO & 2FA
- ✓ Multi-tenancy
- ✓ Cloud-DMZ
- ✓ Connection to external devices
- ✓ Hybrid and Multi Cloud integration
- ✓ Adaptable framework

## oneclick™ for Businesses:

- Implementation of mobile workspaces
- Reduction of IT costs
- Simplification of complex IT structures
- Realisation of hybrid strategies (on-premises and cloud)
- Increase of competitiveness
- Increase of productivity
- Access control and audit logging
- Increase of IT operational safety

## oneclick™ for MSPs:

- Automation of provisioning (infrastructure, applications and services)
- Reduction of maintenance expenses
- Multi-tenancy
- Flexibility for customer projects
- No special knowledge on cloud providers required
- New business models in Managed Services
- Simple and logged remote support
- White label

## oneclick™ for Software Vendors:

- Modernisation of applications (cloud-enabled)
- Independence of operational system
- Reduction of development costs
- Reduction of development time
- Increasing attractiveness of software
- Development of new markets
- Cross- & Up-Selling potential
- Minimisation of security risks
- Simple demo environment

## More about oneclick™
