

What is TCM SYMPRA?

Find answers of all your questions like; Where are the employees? which duties are they doing? for how long are they working? what are their requests?

Sympra is a mobile phone application. You and your system can send push notification to your employee. Sympra is available on IOS and Android platforms. You can set your alerts from Application Insights and Azure Operational Insights metric from Azure Portal. Assigns a notification to the system administrator when any value falls outside the specified range.

You can create private groups from management site and your notification can send any group you want. You can send custom message to your System Admin from management site.

SYMPRA Application can use only with TCM Cloud Manage Service Solution or TCM Application Modernization Solution.

Key Features of SYMPRA

Log In

For access to SYMPRA first a log in via the mobile phone number or ID Number is required. If this data match with the employee database, the user gets access. This procedure guarantee that only company employee become access.

Dynamik Menu Management

With this feature all companeeyes can create an dynamic menu. SYMPRA allows to add as many applications to your menu as you want. Also the placement and visiabilty of these applications is manageable.

Crisis Notification

Send notifications to your employees or an specific employee in crisis and disasters. Ask them to respond. Log all responses, locations and contact information of each employee.

Push Up Notification

Send all announcements and informations via push up notifications to SYMPRA and check if they are read or not. Push notifications reach the devices of employee and are shown even the application is not on. You can select your target as person, group or all employee.

Check-in / Check-out

Log the predefined places your employees visit with the check in and check out feature. Employees can reach the daily check in and check out reports by hour.

Track the daily routine of Sales stuff and mobile employees and optimize their schedule.
