

SIMPLER ACTIVITY & TIME TRACKING

Daily Job Planning Tool

Designed specifically for supervisors to plan the day, pre-populate activity and easily update variations based on hours needed in each activity. This enhanced visibility promotes better planning, forecasting and data-driven decisions to be made.

Reduce Admin and Data Entry Overheads

Digitisation of manual processes and reduction of double recording via spreadsheets. Accurate and transparent data capture ensures that supervisors are spending more time on the field rather than processing administrative tasks.

Evidence-based Variation claims

Record accurate variations on an activity level rather than a work order level. This shows the reasons and time of variations which helps identifying delays and any patterns in recurring delays.

Return on Investment

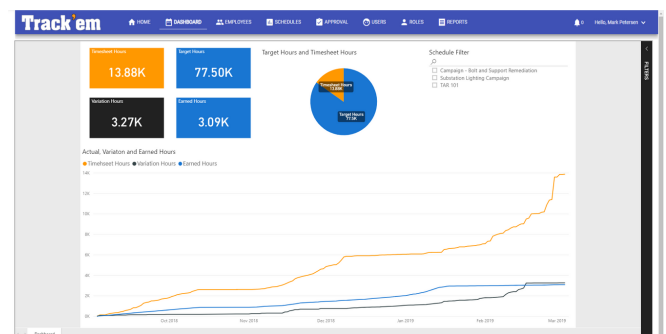

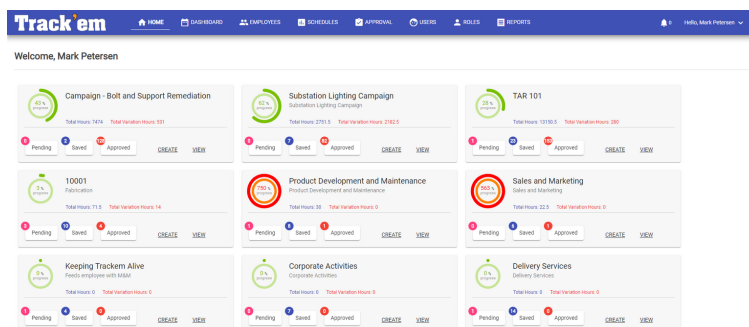

Client-contractor communication is streamlined through digital approvals of daily generated timesheets. Moreover, process flow validation ensures data integrity which can be used accurately to produce configured reports of billing and payroll.
