

VIDsigner

Always be yourself

Putting people first

Informed consent and more

Electronic signatures for informed consent and other medical and social service documents.

It is important for the patient to be comfortable with both what he is signing how he is signing it.

VIDsigner responds to the needs of the health sector regarding the obtaining of the patient informed consent and physician ratification. **VIDsigner** allows simultaneous use of both biometric

signatures and qualified electronic signatures in the same document through the use of qualified digital certificates and secure signature creation devices.

VIDSIGNER HEALTHCARE PROCESS

1. Send from HIS

Documents to sign are created from the Health Information System (HIS).

2. VIDsigner cloud

Documents remain in the cloud waiting to be signed.

3. Bio signature

VIDsigner allows patients to manually sign on a tablet in exactly the same way they would on paper.

4. Doctor signature

Doctor can choose to sign with biometric signature or qualified signature.

5. Resulting document

VIDsigner collects biometric and contextual evidences and creates the final document with highest legal guarantees.

6. Document storage

The signed document returned to HIS for a secure storage
