# Migrate your server and data to the cloud in a agile way using customized tools

Cloud Migration Framework enables agile Projects deployments with shor-term results.

## QuickModernize Beacon42 – Data & Servers

This is a solution that allows to migrate data and server to the cloud using tools and customized processes in a fast way. Additionally, modernization cost is obtained to classify serves according to their size (S/M/L/XL) and minimize risks for technology adoption.

- Proven processes and tools are included
- All kind of Server, Operatiing System or Database Management System can be migrated
- Information is moved in a fast and agile way.
- Experience for more tan 100 servers and applications migrated trough time.

### Mobility

- Access your cloud solution anywhere and anytime using a internet enabled device.
- Easy to use
- A robust and flexible platform

### Service

- Permits to approve the migrated platform before going live. This ensures service quality and availability
- Risks are appropriately Managed.
- Migration processes are optimized and with better performance than manual procedures.

### Optimization

- Tools and services are included to move data and servers in a transparent and accelerated way
