# AD USER MANAGEMENT PORTAL

ADEO IT - Customer Case Study Example

**TEB**

A respectable and privileged financial institution engaged in the Turkish banking industry, TEB went into action in 1927.

TEB Mali Yatırımlar A.Ş., one of the shareholders with 84,25% of shares at TEB, which went public in 2000, executed a partnership agreement with BNP Paribas on February 10, 2005, which is the 6th largest bank in the world and is the largest of Euro zone with ongoing operations in 74 countries around the globe.

## What Does The Customer Need?

Since the Regulatory and compliance considerations are significant barriers to adopting cloud computing in Turkey, TEB was concerned about using their Office 365 products. However, in the scope of employee benefit approach, TEB wanted to enable their employees to use Office 365 ProPlus on their personal computers.

## What's The Solution?

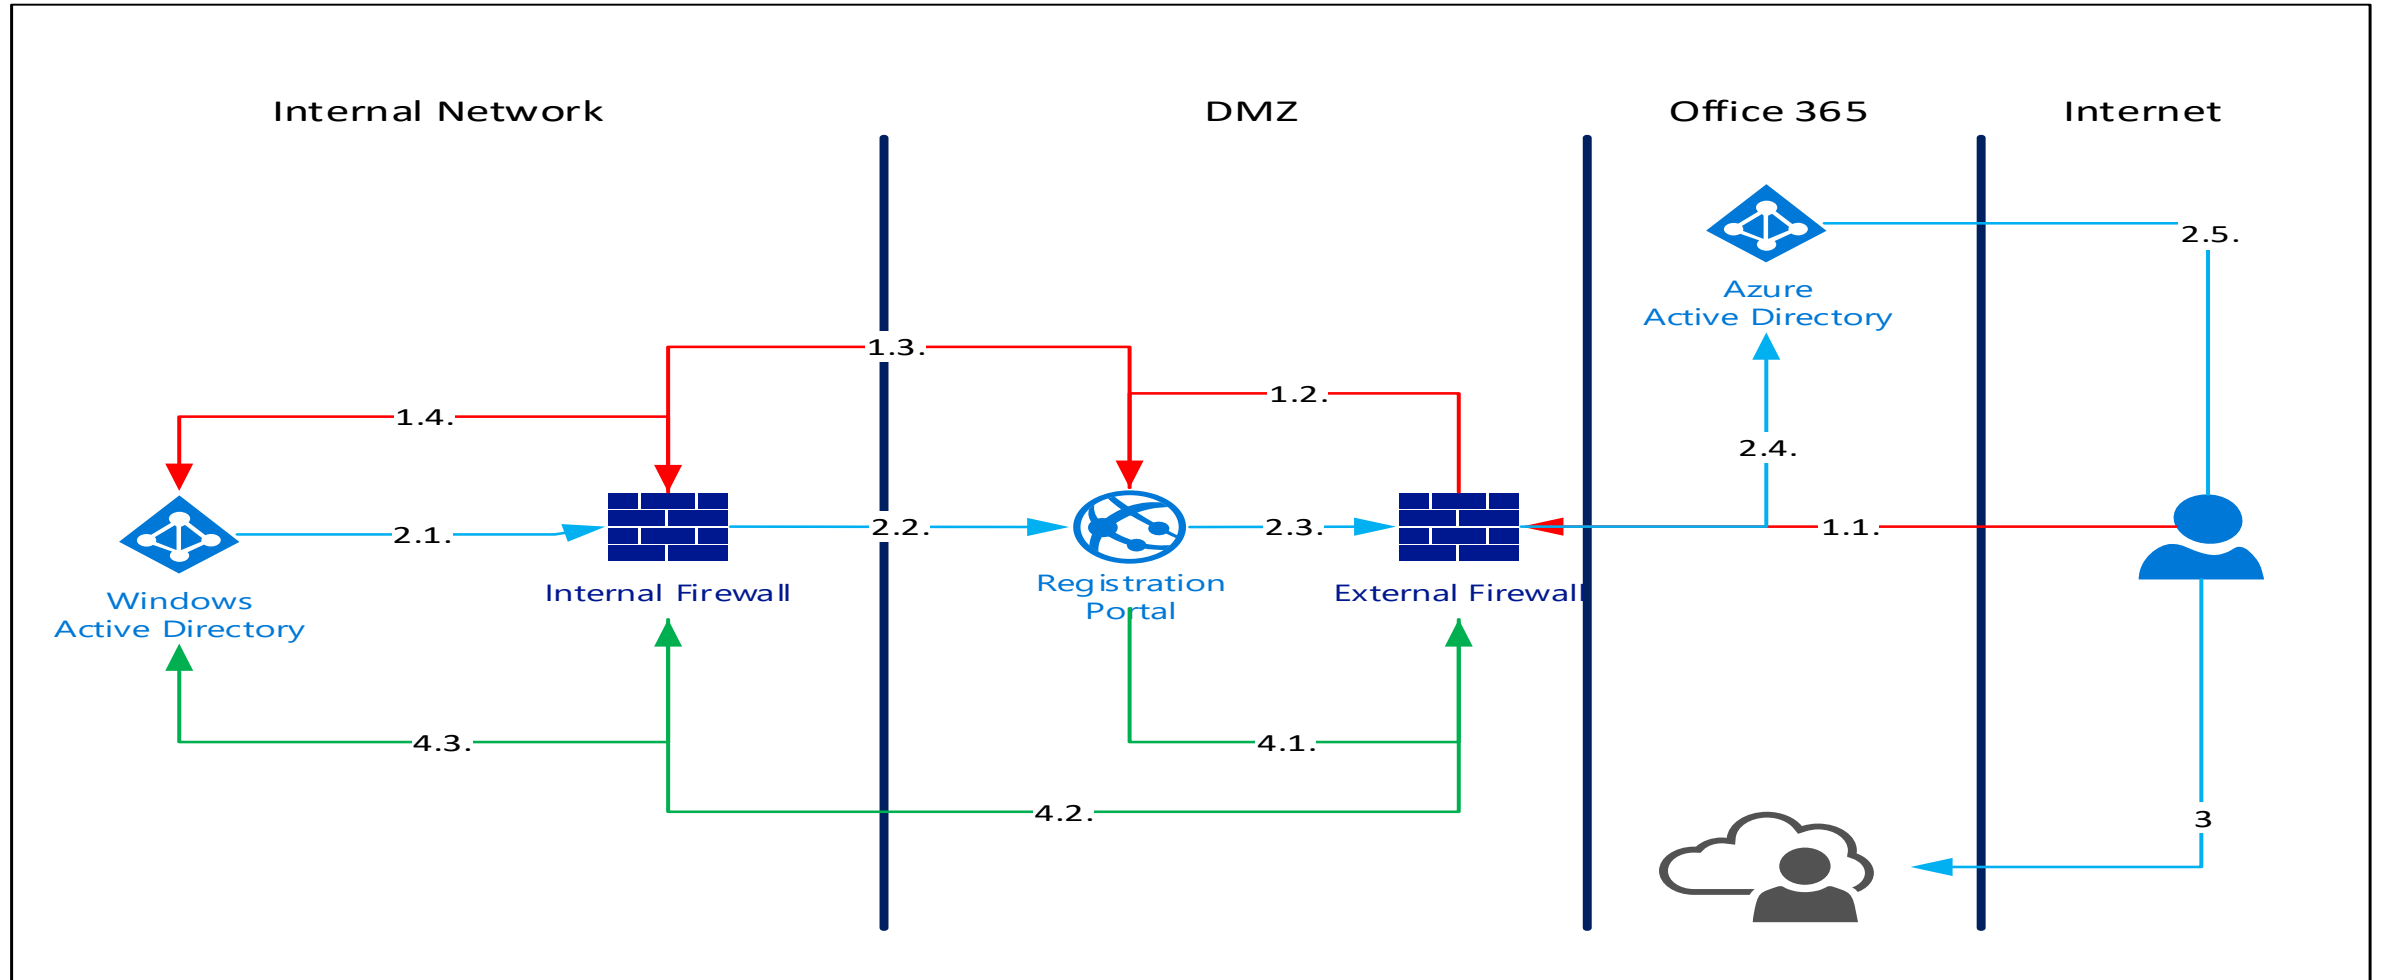

- ADEO IT developed an application, AD User Management Portal, that addresses the customer's concern about synchronising on-premise credentials with the cloud. The Portal is compliant with cloud-regulated structures and easy to manage, monitor & report.
- Basically, the solution provides a secure Portal where users can create a new ID in the cloud using their existing IDs.
- ADUM Portal has the capabilities such as regularly checking that the user is an active employee, providing license management, activity monitoring and so on.
- These capabilities provide a comfortable management portal to IT executives.

## Customer Feedback

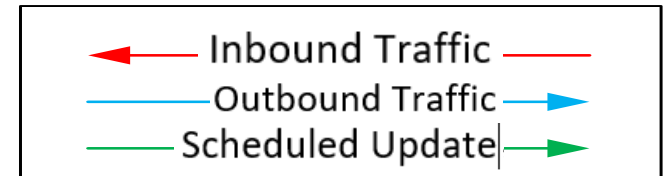

Thanks to ADEO's Portal solution developed in accordance with all compliance policies; our employees are now able to use OPP outside the office environment.
