ADEO IT Solutions:
AD User Management Portal

What is AD User Management Portal Solution?

The AD User Management Portal solution is for the customer who are concerned about synchronising on-premise credentials with the cloud.

This solution saves customers from the burden of managing two seperate ADs.

What ADUM Portal Provides...

- Basically, the application provides a secure portal where users can create a new ID in the cloud using their existing IDs.

- ADUM Portal has the capabilities such as regularly checking that the user is an active employee, providing license management, activity monitoring and so on.

- These capabilities provide a comfortable management portal to IT executives.

Registering to Microsoft AD Structures (Windows or Azure)

- Operates in customer's Data Center or in Public Cloud environments such as MS Azure.

- No need to write permission on directory services servers.

- No stored password is required in the application. It works completely with Password hash logic.

User Activity Controls

- It regularly checks user activities and whether users are active. Information can be obtained as a result of the control or operation can be done automatically.

- The reporting interface is available and can be improved.

Creating License Processes

- It can be owned via rent

- Suitable to PaaS services.

- It is/must be published using SSL.

- Log-on names are used for LDAP queries.

- Integration with SIEM solutions.
