timeout digital time management

timeoutdigital time management

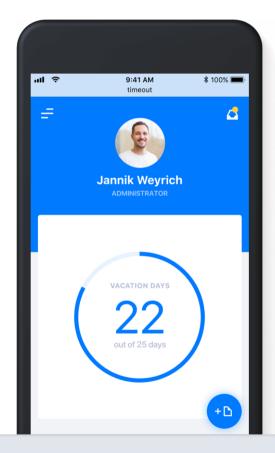

What is timeout?

timeout is a web app for managing absences, such as vacation or notification of illness. With the help of timeout, each employee can submit an application for leave. From anywhere, with any device. These applications can then be accepted or rejected by a supervisor.

What are the advantages of timeout?

timeout saves both time and paper. Applications for leave can be submitted and processed in just a few clicks.

Additionally, timeout keeps track of planned absences allowing coworkers to better coordinate projects and their vacation.

Who is timeout for?

Employees

As an employee, you can submit requests for various absences, such as vacation or notification of sickness. You will automatically be informed if your applications have been processed by a supervisor. You can also view the absences of your colleagues to stay informed and better plan for future projects.

Supervisor

As a supervisor, you can accept or reject your employee's applications in just a few clicks. Additionally, you can easily manage your employee's vacation accounts, keep track of when each employee is absent and check how many vacation days they have remaining.

Which Office 365 / Graph-API features do we use?

We use the Office 365 login.
Our users are able to use their existing office account to log into timeout

We use existing Office 365 groups to manage teams and responsibilities

A "Microsoft Teams Bot" keeps our users up-to-date about their absence requests. Supervisors can even accept or reject requests right in their Microsoft Teams Application

What are our plans for the future?

We have plans to integrate Azure Cognitive Services

- for vacation prediction
- to suggest healthy vacation patterns

 We plan to extend the calendar functionality, provide time-tracking and integrate with more services
