myDPRights
GDPR Request Portal Solutions

DISCOVER MyDPRights

MyDPRights is the first secure web platform to enable companies and organisations to collect all personal data requests from their customers and thus bring themselves into line with the new GDPR regulation in a simple, effective way.

The platform offers those companies and organisations – and particularly their DPOs (Data Protection Officers) and other data processing managers – a tool they can use to manage requests and deal with them more easily. It helps users to:

• Centralise requests

• Meet deadlines: track requests and respond to them within 30 days

• Keep evidence of the request and the response

• The consumer/citizen, meanwhile, can track their request, amend it, or submit a request to the company to delete the data it holds.

STRENGTHS

Multilingual
The current version of the application has been translated into 6 languages: French, English, Italian, Spanish, German and Dutch.

Traceability
All requests are logged and accessible at all times.

Security
All exchanges use HTTPS over SSL, ensuring that data is encrypted throughout its journey.

Centralisation
All requests and responses are centralised in the application.

ABOUT US

MyDPRights was developed and launched in 2018 by Ainos.

Aware of the current challenges posed by the GDPR regulation, Ainos decided to develop a turnkey solution for the European market.
