

Office 365 Management

Your Cloud, Our SaaS. A Powerful Combination.

Administration

- Centralized Management Manage Office 365
 Groups, SharePoint Online, and OneDrive for Business
 security settings, configurations, and content through a
 single dashboard.
- Bulk Configuration Perform all SharePoint administrative functions in bulk and across multiple SharePoint
 Online instances.
- Security Trimming Carry out automatic security trimming and granular delegation for accountable users, AvePoint Cloud Management modules, and Office 365 sites and content.

Grant Temporary Permissions

- Security Search Allow administrators to search for and manage native user or group permissions, even at specific levels, directly through Office 365 Groups, SharePoint Online, and OneDrive for Business.
- Temporary Permissions Assign temporary permissions to individual users or groups within Office 365 and audit all administrative actions.
- **Rule-Based Search** Utilize rule-based search capabilities to quickly identify, edit, and manage Office 365 objects.

Content Migration

- Restructure with Full Fidelity Copy, move, or restructure sites, content, and topology within or across Office 365 tenants while preserving associated permissions and metadata.
- High-Speed Migration Tenant-to-tenant migrations are up to ten times faster than before using Microsoft's SharePoint Online Migration API and Azure technologies.
- List and Library Integrity Maintain list and library integrity with full support for all list types (including in-place records, document libraries, issues lists, discussion threads, and announcements), content metadata, and configurations while restructuring.
- Granular Deployment Granular deployment of select SharePoint objects and customizations—including site collections, sites, lists, folders, items, configurations, design elements, security settings, Managed Metadata Service settings, web parts, workflow and forms — to other locations.
- One-to-Many Element Propagation Propagate site elements from one object to multiple destinations to quickly make changes across sites or Office 365 environments.

- **Scheduling** Customize schedules to propagate changes outside of business hours.
- Deployment Comparison Compare source and object details for propagation as well as propagate elements and execute tasks from one object to another (or to multiple objects).
- Rollback Automatically back up a destination environment for easy rollback.
- Simplified Domain Consolidation Simplify content migration by allowing all objects tied to specific users to be moved from one domain to another in bulk.

Granular Deployment

Monitoring & Policy Enforcement

- Policy Enforcement Monitor for and automatically notify or adjust unauthorized or out-of-policy changes to configurations, features, permissions, and settings with out-of-the-box, configurable rules.
- User Restriction Restrict access to and sharing of Office 365 Group team sites, SharePoint Online sites, and OneDrive for Business content both internally and externally.
- Batch Mode Control sites and site collections with batch mode to quickly implement configurations, enforce policies in bulk, and reduce costs associated with infrastructure management.
- Managing External Sharing Effectively manage external sharing activities in Office 365 by vigilantly controlling where and how external sharing is permitted.

User Restriction

Reporting

- Global Reporting Generate reports on global Office 365
 SharePoint Online, Group team sites, and OneDrive for
 Business settings and security to track any unauthorized changes and react.
- Audit Reporting Generate audit reports for item lifecycle, list deletion, permission changes, site access, and user lifecycle across an entire Office 365 environment.

Global Reporting

- User Activity Report Audit all user activities in SharePoint Online, Exchange Online, and Azure Active Directory (AD) through integration with the Office 365 Activity Management API.
- Report Exportation Export reports to a local system or publish to SharePoint libraries for analysis.
- Report Location Allow customers to connect to their own SQL Azure databases in case the default Report Center database reaches full storage capacity.

User Activity Report

Synchronization

- Cross-Instance Replication Move or copy Office 365
 Groups, SharePoint Online, and OneDrive for Business
 content with associated metadata for automated content
 publishing and synchronization.
- **Filter Policies** Publish select Office 365 content across sites, lists, and libraries using policy filters based on built-in or custom metadata, such as approval status.
- Real-time or Scheduled Replication Perform live, real-time replication based on customizable event triggers (including item updates, deletions, and moves) or perform scheduled replications as often as every 15 minutes.

Cross-Instance Replication
