

CREDIT PROCESS **AUTOMATION**

THE PATH TO AUTOMATING THE CREDIT LIFECYCLE

Faced with increasingly sophisticated customers and more and more pressure from regulators and competitors, but often weighed down by manual processes or too rigid legacy systems, financial institutions can increase their efficiency, develop their market position and raise their profitability by further automating the lending process and risk measurement techniques.

To assist them, Axe Credit Portal (ACP) is a highly flexible end-to-end credit process automation solution for all aspects of the lending lifecycle, including application processing, credit assessment, automatic document generation, limits & collateral management, covenant management, portfolio management, loss & recovery, and provisioning.

axe Corporate Lending

axe Corporate Lending solution brings powerful functionality to lenders and is designed to more effectively automate and manage the credit management chain and follow up processes. It streamlines the whole credit lifecycle from client onboarding to facility sanctioning, all the way through origination, appraisal, rating, approval, credit administration, disbursement and post-disbursement covenant and performance monitoring.

axe Corporate Lending handles an unlimited number of funded and unfunded products and can host complex facility structures, offering an integrated and configurable eligibility and risk based pricing engine.

A variety of internal rating models could be hosted providing dynamic Risk Premiums at transaction levels aggregating to Probability of default (PD) and Loss Given Default (LGD) for Basel approaches.

axe Limit Management

In order to more effectively manage its credit risk, a bank needs to allocate limits against its various counterparties and consolidated exposures, axeLimit Management allows to manage and monitor limits and exposures at bank wide level across banking & trading books by interfacing with various source systems.

axe Limit Management solution can handle structures with an unlimited number of limit layers and supports all types of operations on limits (temporary or permanent suspension, reallocation, period extension...) axe Limit Management also fully supports limit reservation processes, limit excess management notifications workflow management and offers a very powerful limit monitoring pre-deal checking engine.

Portfolio Limits are also managed including concentration limits (single obligor, sector limits, country limits, etc. or any combination of these) with real-time pre-deal checks of these.

axe Collateral Management

axe Collateral Management allows the management of general (counterparty or group of counterparties) and specific (facility or facilities within the same counterparty) collaterals.

During the credit approval process and throughout the life-cycle of a loan, axe Collateral Management supports the creation and administration of collateral files, their initial and subsequent valuations and realization in the event of default. All aspects of collateral management are addressed, including a number of advanced features which ensure to effectively manage all aspects of collaterals, and the associated workflows, right across the bank's operations and departments including remote locations and international subsidiaries.

axe Collection & Provisioning

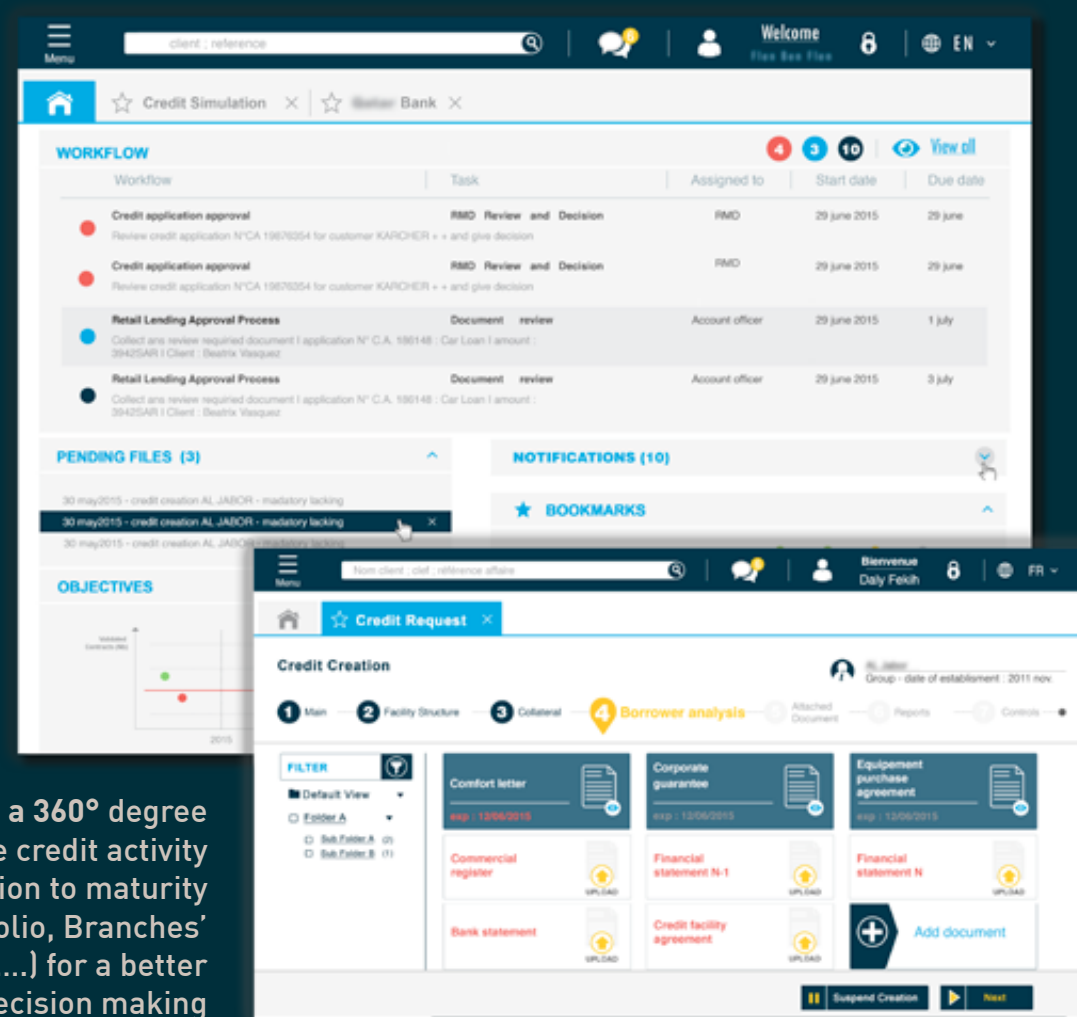

axe Collection & Provisioning is a collaborative solution for creating and managing recovery and collection processes subsequent to loan classification and credit events including remedial and litigation actions.

Remedial workflows are triggered for doubtful and non-performing credits including all relevant details and circumstances, dates, etc. and their related recovery actions. The loss data collected can later be used to develop LGD and recovery related models.

axe Collection & Provisioning captures all the required inputs to calculate individual or collective provisions for performing, watch-listed and impaired assets. Provisions' calculation time can typically be reduced from 3-4 weeks to less than one hour.

axe Retail Lending

axe Retail lending brings together powerful workflow and rule based engine features to automate and fully control the activities related to the processing of loan or credit card applications, from walk-in all the way through disbursement. Through its enhanced STP capability, powerful eligibility engine, native dedup functions, flexible and rule-based document checks and generations, axe Retail lender allows banks and retail lenders to enhance customer service and response times, deploy new product offerings in no time, reduce operation risk and enhance risk assessment by providing alrisk managers with a single consolidated view.

ACP offers a 360° degree view of the credit activity from origination to maturity (portfolio, Branches' objectives....) for a better decision making

FOCUSED ON CREDIT AUTOMATION, INSPIRED BY VALUE CREATION

Financial institutions are increasingly seeking the expertise and value that we offer. In meeting their needs, we align our solutions to ensure that the competing interests of technology and business are addressed

Focus and Long-term

axe finance strategy is to be totally focused on one and only core business and to reinvest a substantial part of our revenue in the development of our people and our solution:

- An optimized TCO
- A high level of expertise ensuring the continuous alignment of our solution to the lending institutions' evolving needs.
- A solid project deployment experience and a smooth change management process.
- A tailor-made client management aimed at helping our clients maximize the value and benefits of our continuously evolving rich solution.

Powerful solution

- A modern web-based solution with a comprehensive functional coverage and easy to interface with all third-parties
- A flexible administration framework allowing to natively manage various products for all client types in multiple geographies taking into account different credit policies, languages, alphabets, and currencies.
- A scalable solution allowing our clients quick adjustments to new business and regulatory requirements at no additional costs (workflows, screens, data structures, documents, policies, reports...)
