GMetrix is the leading provider of Microsoft Office practice materials for preparing students and professionals to pass their upcoming certifications. GMetrix works closely with strategic partners, including Microsoft and Certiport, to create online practice tests and courses designed to be taken at one's own pace. Users can learn and practice while in the classroom or from the comfort of their home.

GMetrix understands that everyone has unique study habits, so we have designed varying formats for our practice tests. Additionally, each test has a Training Mode and a Testing Mode that both utilize the actual Microsoft programs. Training Mode allows users to start and save their Microsoft Office practice tests whenever they need to, and more importantly, it provides immediate feedback and help along the way. Testing Mode provides users with the opportunity to experience what the official certification will feel like by simulating the certification environment's user interface, time frame, question types, and phrasing. Both modes allow users to learn the software, gauge their knowledge, and prepare for success for all Microsoft Office certification exams.

The road to earning the Microsoft Office Specialist certification may be daunting, and such certification may be only one part of the skills or proficiencies students and professionals are required to display. That is why GMetrix offers practice tests and courses not only for Microsoft Office programs (such as Word, Excel, or PowerPoint) but also for the Microsoft Technology Associate (MTA) and Microsoft Certified Educator (MCE) certifications.

Microsoft certifications provide students and professionals with an excellent way to demonstrate to customers, peers, and employers a comprehensive understanding of the fundamental aspects of Information Technology. Additionally, once users earn the MOS, MTA, and MCE certifications, they can then pursue higher-level certifications if they desire.
