Seamless

The simple but smart project and team workplace

SharePoint   Office 365   Microsoft Teams

«

The combination of our existing industry and ERP solution with the latest Microsoft collaboration technologies in Seamless helps us shorten project times and save costs.

»

Zeno Böhm
CFO, Burkhalter Gruppe

Why Seamless?

Microsoft Office 365 encompasses central tools like Outlook, Word, Excel, OneNote as well as Skype, email, SharePoint and OneDrive for daily collaboration in projects and teams. Given the multitude of technologies available to Office 365 users, choosing the right tools for a project can be a challenging and not necessarily intuitive task.

This is why Seamless combines selected collaboration functions from Office 365 for project tasks in a simple but smart, intuitive user interface.

All information is presented centrally at one place – and your teams can focus on working on the content.
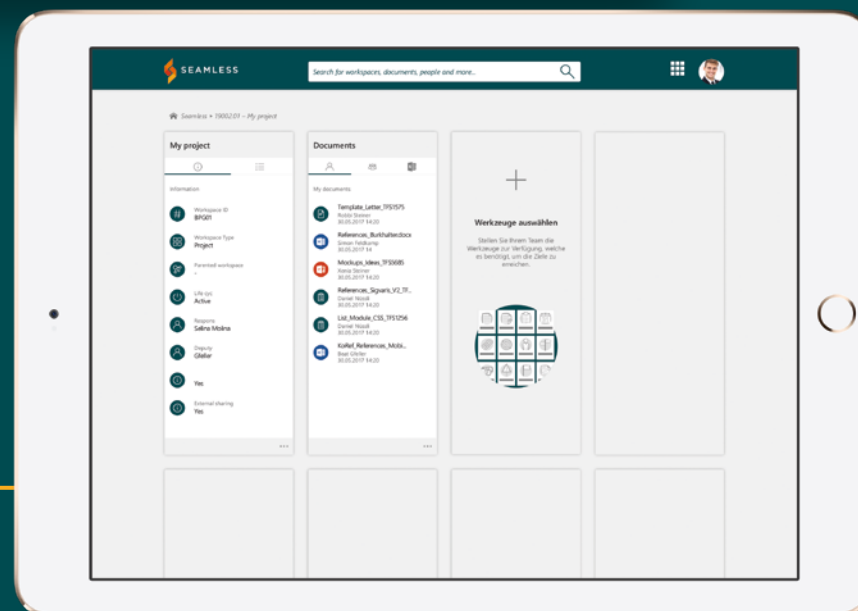

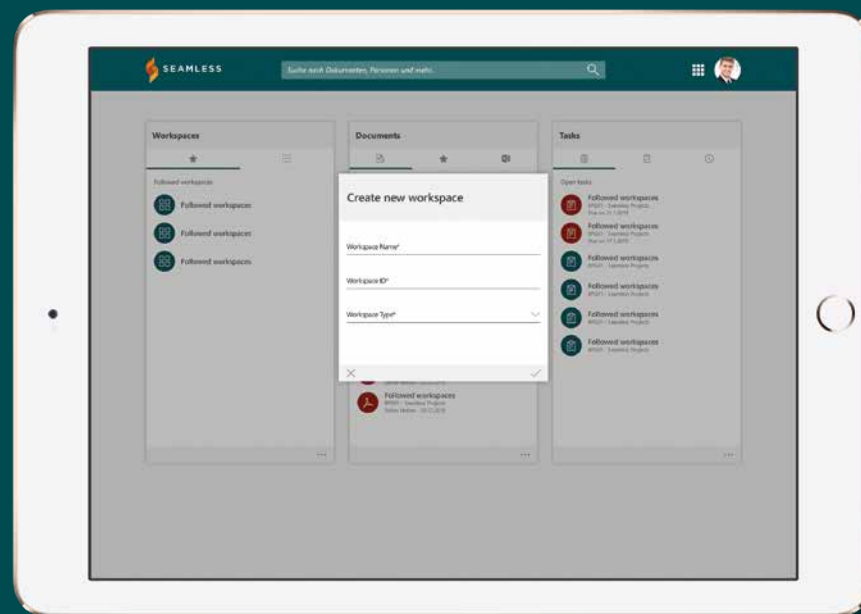

Within seconds you can set up uniform, mobile-enabled work spaces for your team and make the necessary project tools available in just a couple of clicks.

Seamless digitises your established project and team workflows and adds the latest Microsoft collaboration technologies to your current industry, CRM and ERP solutions.
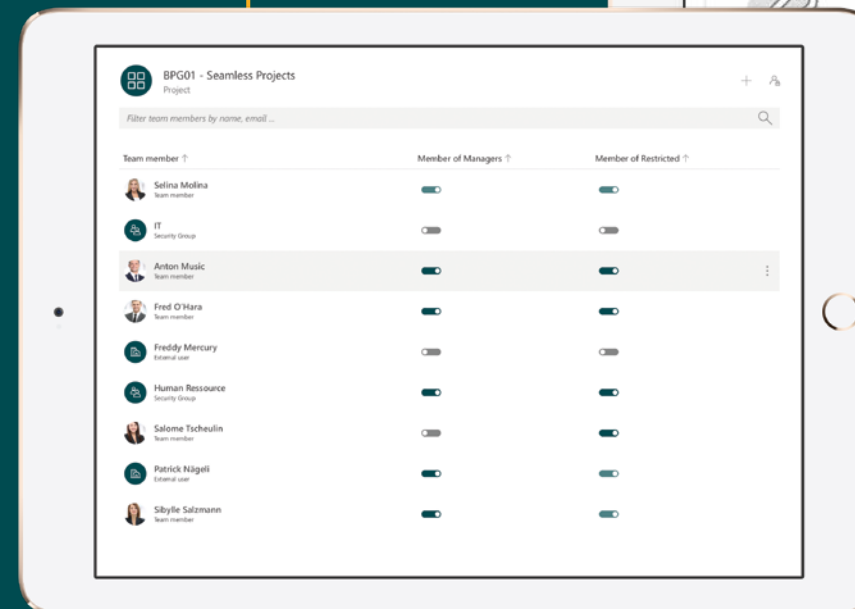

Nothing simpler than Seamless

1 Easily create workspaces via the web inter-face or directly from your CRM, ERP or industry solution.
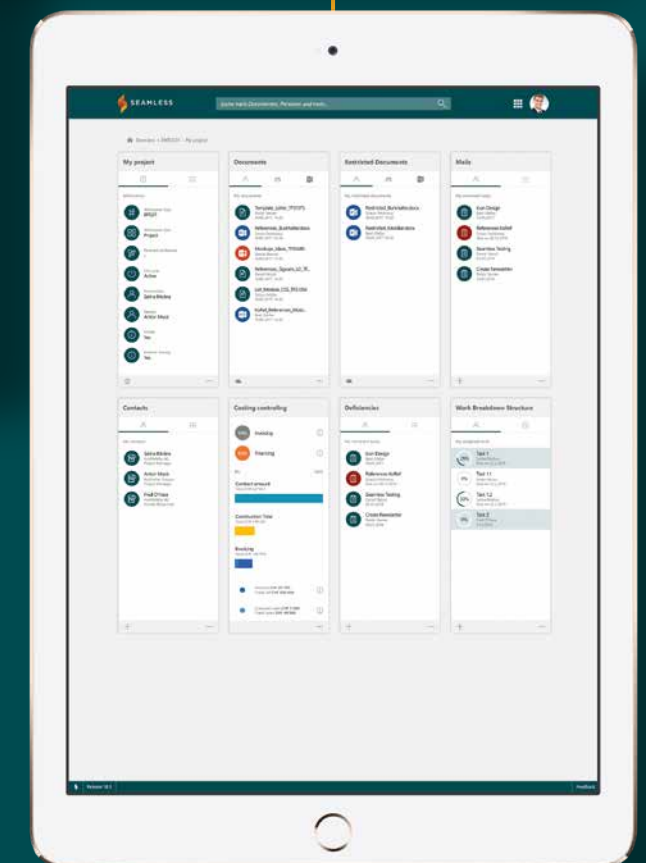

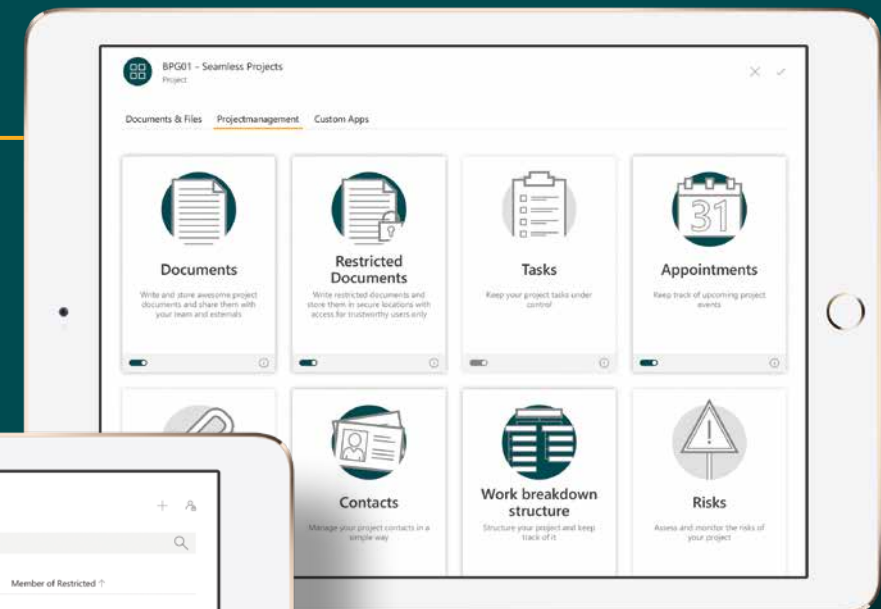

2 Specify your requirements for workspace ty-pes and make them available automatically. These can include offers, customer and service projects, teams, departments, meetings, sites, and data storage.

3 Easily invite internal and external project members via the intuitive access control.

4 Make the necessary project tools available with just one click. Alongside the predefined tools you also have access to customised tools as required.

5 And in no time at all the team can get down to working on the project content.

The Seamless workspace

Everything at a glance

Each workspace has a clearly arranged dashboard. Its intuitive apps present the various aspects of the project. Once logged on, a user sees all the information at a glance, and the team works centrally in one place.

With just one click, project managers can add the apps used in the project to the workspace. Predefined apps are available for project planning, project organisation and document manage-ment, and customised apps are also available as required.

On-premise
From your data centre

Project information
Your project information can be map-ped in Seamless or directly from your legacy CRM, ERP or industry solution.

Key figures
Take real-time project key data directly from your ERP or industry solution.

Office 365
Collaboration tools

Documents and notes
Thanks to Seamless, you can use the multiple advantages of documents in SharePoint like sharing, versioning, concurrent editing, offline files and access via Office apps.
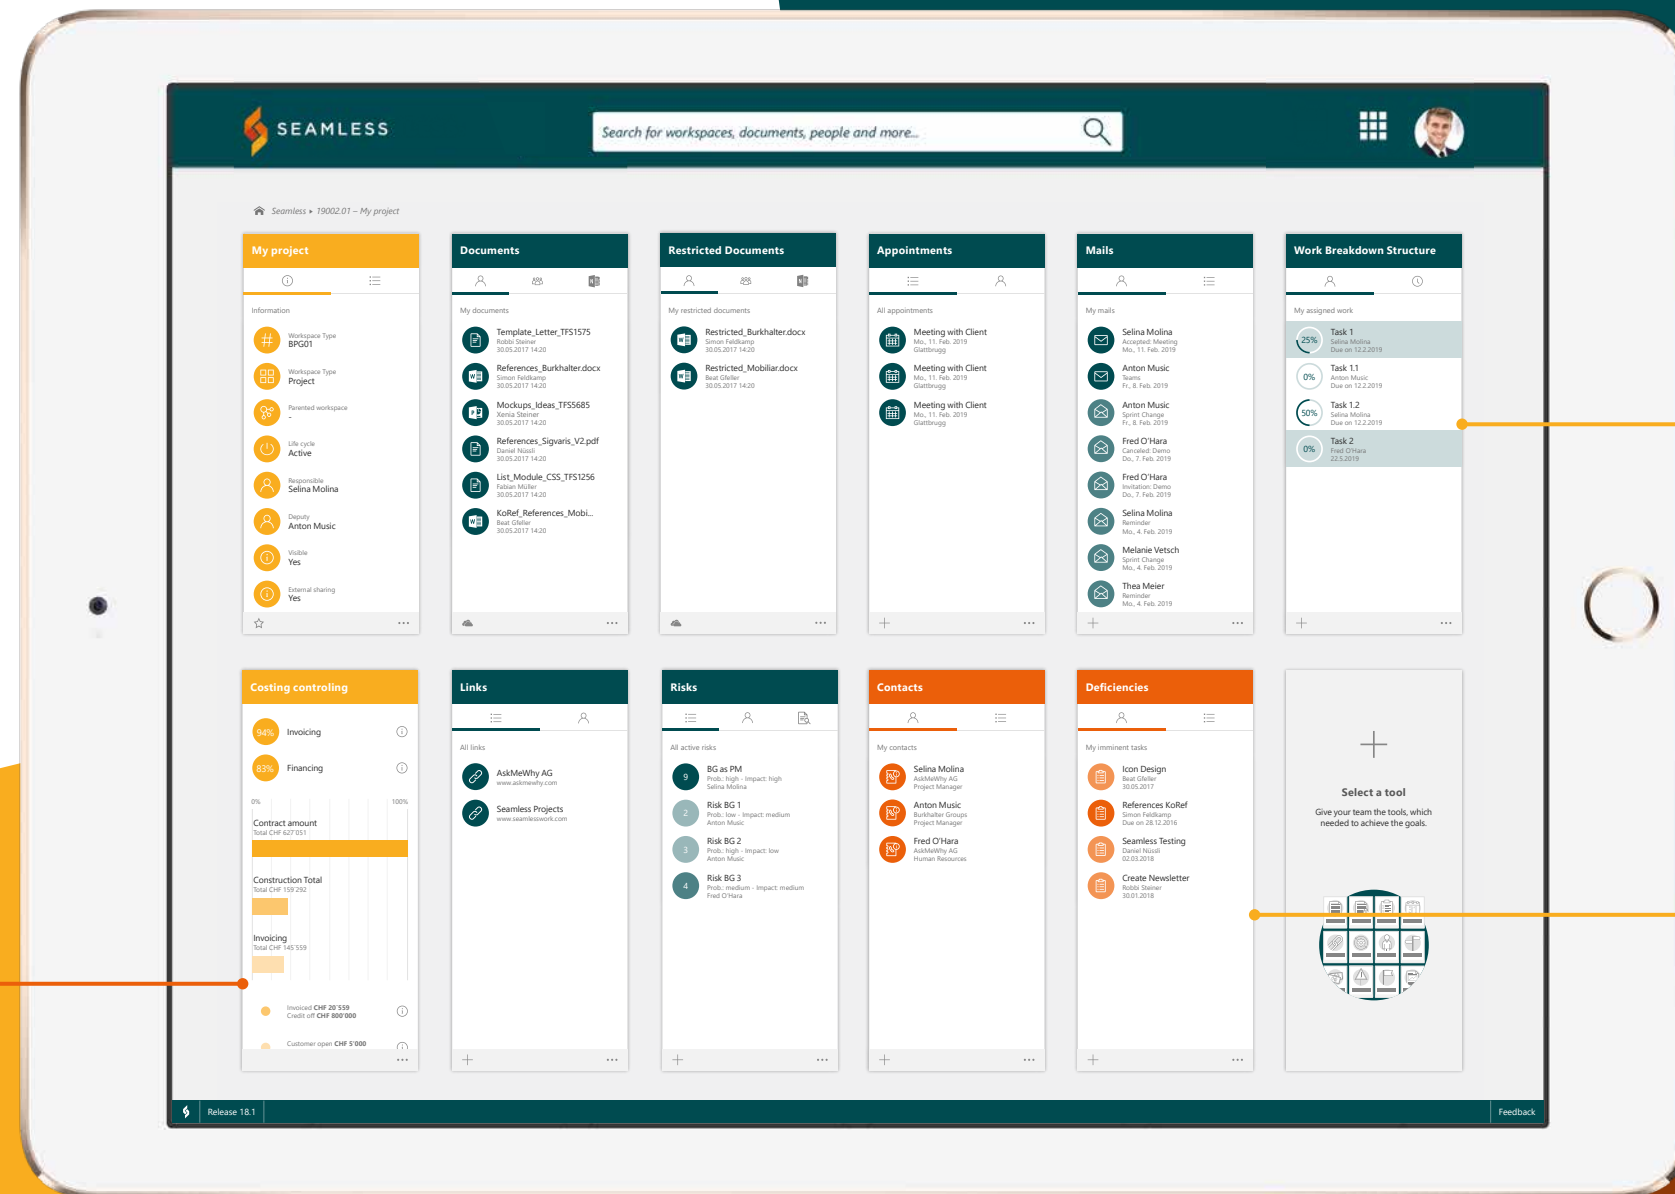

Tasks, meetings and more...
SharePoint offers many tools for collaboration in projects and teams. Each app on the dashboard represents one aspect and showcases the information which are relevant for you as a user.

Cloud services
Tools from third-party providers

CAD data, simulation data, model data, and other special data
In the Seamless workspace you can display data and information from specialist applications stored in Microsoft Azure.

3rd party cloud
You can also have project data dis-played at any time from popular cloud services like Google G Suite, Atlassian Confluence, Jira, Microsoft Dynamics and Dropbox via interfaces.

What Seamless can do

Predefined apps

Meta-information & settings
Management of individual meta-information per workspace type. Synchronisation with your ERP, CRM and industry solution.

Security & permissions
Simple access control for internal and external members as well as control of visibility, status and external sharing.

Public & sensitive documents and notes
Creation and editing of documents and OneNote notebooks for the complete team or a limited audience.

Seamless & teams
Company-wide communication with persistent chat, audio and video conferences and screen sharing.

Tasks & milestones
Planning and management of tasks from MS Project, SharePoint task list and Microsoft Planner. Hierarchical display of work packages and results. Assignment of tasks and project status tracking.

Mailbox
Management of relevant project emails in a central mailbox.

Appointments
Overview of upcoming project events. Creation of events for your team. Integration with Outlook.

Risks
Assessment and monitoring of project risks, assessment of probability and effect of risk scenarios, and definition of strategies for risk mitigation.

Defects list
Logging, reporting and tracking of defects via smartphone or in the web browser.

Search
Google-style search of workspaces, documents and people.

More apps
Creation of individual apps and workflows based on SharePoint document libraries and lists.

With Seamless you can continue to use your legacy intranet solution and third-party tools like Nintex workflows.
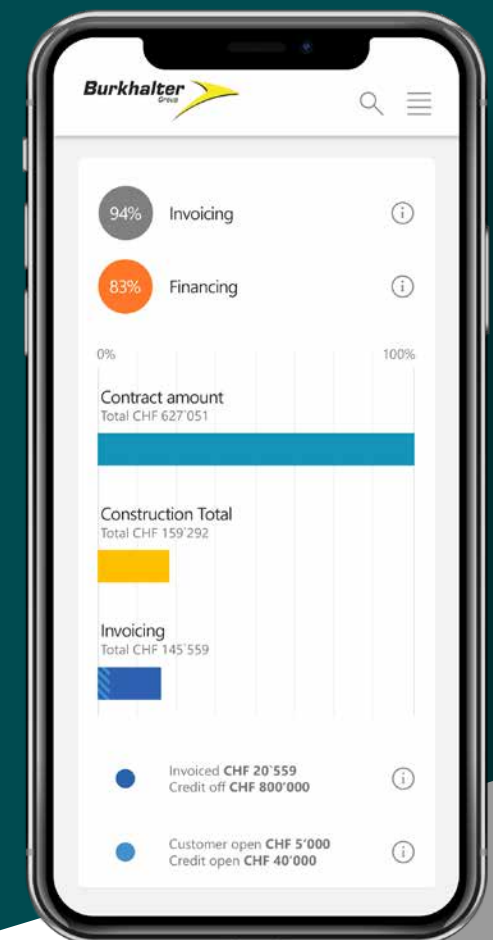

Custom apps

You would like to display information from your legacy CRM, ERP and industry solutions and map existing procedures in your company? No problem!

If required, we develop custom apps. And it doesn't matter whether they display content and information from on-premises systems, Office 365 or other cloud services.

Typical examples:
· Final project costing
· Reporting of contribution margin
· Financial and quality key data
· Defects lists and reports
· Project workflows and quality management
· Document templates
· Standard tasks and checklists
· CAD storage in Azure

Financial key data in real time from the on-premise ERP system

Workspace templates & corporate branding

You configure the workspace templates. Seamless uses them as a basis for automatically creating your workspaces. In addition to custom configuration and design you also select your organisation structure, different types of workspaces, metadata and standardised folder structures.
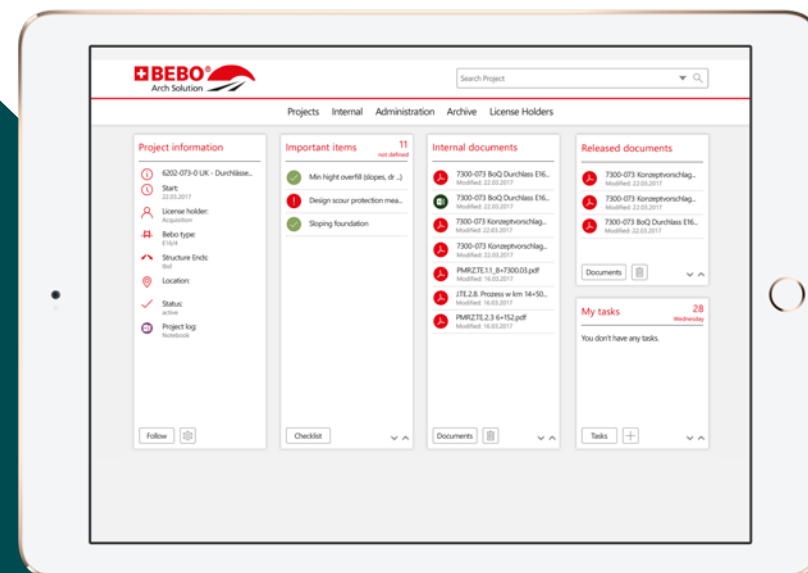

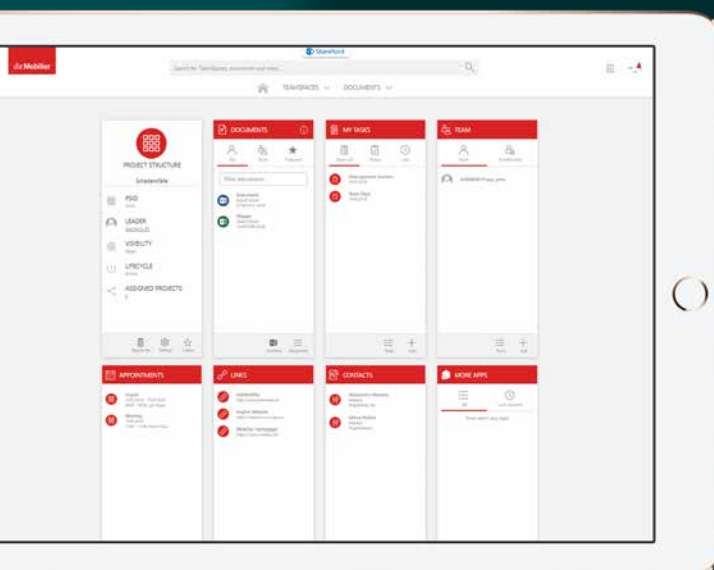

officeatwork Template Chooser for SharePoint

Using the officeatwork Template Chooser for SharePoint you can more easily find, use and manage your templates in SharePoint. This is the reason why we have integrated the Template Chooser for SharePoint in our offer for you.

Individual customer examples

Test Seamless

The following examples show how we have united the legacy workflows, ERP, CRM and industry solutions of our customers with the latest collaboration tools of Office 365 and SharePoint.
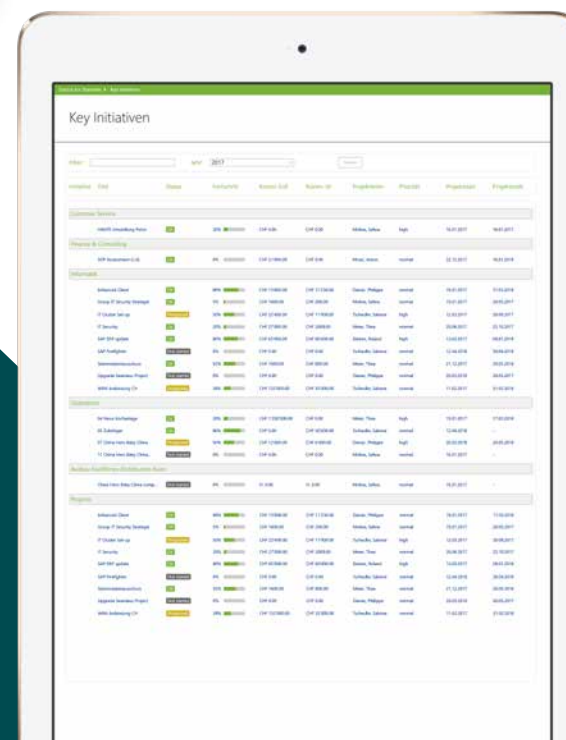

Test the full scope of Seamless functions completely without obligation – all you need is an Office 365 subscription per user.

Pay as you go
No purchasing costs, no unnecessary licences – our customers pay only for those employees who actually use the solution. You can adjust the number of licences up or down as required. The more licences you have, the lower the unit price.

Azure
An Azure subscription is not necessary.

No lock-in
If you want to uninstall Seamless, your data remains unchanged and you can continue to use it. Only the Seamless interface and the automatic provision of predefined workspaces and tools are removed.

Office 365 licences
The requirement for Seamless is a SharePoint online licence from Office 365. Any plan can be used as long as it includes SharePoint.

Automatic updates
Seamless is operated and maintained in Azure by AskMeWhy. New functions are updated regularly at no extra cost – no „reinvestments" are necessary.
