

Migrating Critical Workloads to G5 DBaaS on Azure

RDX combines the best DBAs, tools, DBaaS platform and time-tested processes to accelerate the migration of popular database workloads to the Azure Cloud. Our certified DBAs are involved from day one to prepare, plan, execute and validate each successful migration. They stay with the customer post migration to ensure a smooth transition to operational excellence while partnering with RDX on select services to fully manage their stack.

Why choose RDX?

- Expert Cloud Migration Services
- Regulatory Compliance
- Robust Security
- ISO Certification
- World Class DBAs
- Proven DBaaS Platform

Discover

- Gather information on database instances
- Run Upgrade Advisor to check and fix issues in your databases
- Complete migration planning checklist to collect key stats, logs, and performance metrics

Plan and Target

- Determine ideal target infrastructure: local, cloud, hybrid, virtualization
- Define data migration methodology
- Define security requirements
- Define a rollback strategy
- License compliance

Migrate

- Leverage proven methodologies and automation to accelerate the migration
- Code remediation
- Upgrade production environment
- Migrate to Azure
- Validate Successful Migration

"We need to keep critical services highly available, and cloud services help with that. We looked at our RDX DBA as a member of our team. He was critical in the overall strategy and planning process. He also helped us leverage our internal resources more effectively." - Justin Moses, Director of Data Center Operations at Barry University
