# √Alertme

Enhance customer communication and satisfaction.

Every company's success stems from their ability to acquire new customers and then convert them into loyal customers. Relevant and timely communication contributes to that success.

Alertme is a cloud-based solution that makes it easy for customers to opt-in to your communications on their terms, choose which channel it's delivered to, and select the type of communication they receive (e.g. payment is due notification, sales promotions, etc).

Drive Engagement – provide your partners and/or customers with relevant, timely communications

Preference Management - enable your customers to choose the type of communications they receive on which channel.

Delivery – know your messages are being delivered to the right customer(s) on their preferred channel.

Comply with GDPR – Alertme provides an audit trail showing customer opt-in for communication.

Simple Integration - download our UI Component from the Sitecore marketplace, drop it into your customer portal, and configure the alert topics.
