

Fusing automotive engineering with scientific research, Stratio works with global vehicle manufacturers deploying machine learning to capture potential issues before they're passed on to production. **Our ultimate goal is to support the vehicle manufacturers of tomorrow enabling a zero downtime future.**

By applying machine learning models to detect anomalies Stratio allows vehicle development teams to **expand the use of collected data from less than 5% to 100%**, and continuously label new issues and deviations.

Stratio's technology can also be leveraged in post-production / aftersales use cases, to enable **state of life assessment** of vehicle components while in use.

Stratio integrates seamlessly with Microsoft Azure - our enterprise structure allows the product and any updates to be easily deployed in your Azure cloud.
