

HCAAlert

Build your Telehealth Triage system.

Patients start to use connected devices to collect data regarding their health condition. They want to deliver this data to doctors for the best advice. This constraint Health Institutions because they are not prepared to receive this amount of data, neither to triage it in order to give proper medical advice.

What is HCAAlert?

HCAAlert is an analytical system that allows you to collect health data from patients at home. It implements automated clinical rules and procedures in order to alert health professionals about the patient's condition. This allows you to deliver remotely a secure and fast medical assistance for a better care.

Why customers use HCAAlert
