

Hope Care

HCAAlert

HopeCare 

HCAAlert is an analytical system that allows you to collect health data from patients at home. It implements automated clinical rules and procedures in order to alert health professionals about the patient's condition. This allows you to deliver remotely a secure and fast medical assistance for a better care

Challenges

Build Hospital at Home

Fast, simple and flexible Digital Health Platform
Free choice - 27 Platforms and Medical devices manufacturers integrated
Solution as HealthVault

Centralized information in a secure and compliant Digital Health Platform

Standardized Clinical Decision

Individualized Medicine, best clinical outcome

Ideal Solution

Centralized Solution for Medical Triage and clinical decision

Unified and Standardized medical data from different sources
Clinical Protocol by Design – Individualized Medicine

HCAAlert model allow implement a Triage tool in order to screen and decide accordantly with specific Clinical Protocol

HCAAlert implements Standardized, Personalized and Individualized clinical protocols (Clinical Protocol by Design)
