

ProcessFrame QMS is a Quality Management System supporting the ISO 9001:2015 standard and running on the Microsoft Azure platform.

MICROSOFT AZURE ISV PROFILE: MODUS CONSULTING SRL

Modus Consulting targets the GRC market (Governance, Risk Management, Compliance Management) since 1988, with a set of solutions based on a common framework, named ProcessFrame, running on the Microsoft Azure platform. We provide standard vertical configurations, as well as adapt the system to support specific customer requirements.

WHAT WE OFFER

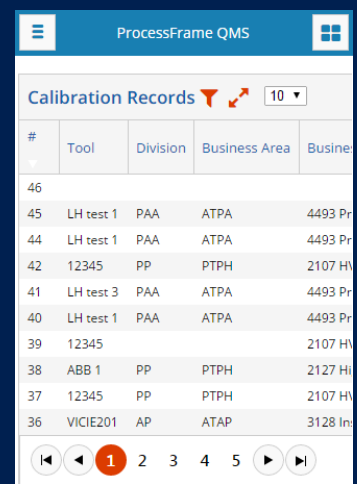

ProcessFrame supports the standard QMS processes and workflows: from document control to complaints, non conformances, corrective actions to calibration and maintenance to audits and checklists. Access is controlled by roles and can be stand alone or Active Directory integrated.

ProcessFrame supports the new ISO 9001:2015 requirements: risk management, extended use of surveys to understand the needs and expectations of stakeholders, planning, actions to address risks and opportunities, control of externally provided products and services.

ProcessFrame supports the convergence of ISO 9001, ISO 14001 and OHSAS 18001. The system can be configured to support a totally integrated management system, independent processes for Quality, Environment and Safety management, or an hybrid scenario.

ProcessFrame can be easily integrated with existing ERP systems. Forms and workflows can be configured to comply with the current company organization and culture, minimizing the impact of changes. The application can be accessed from PC's, tablets and smartphones with all modern browsers.

WHAT OUR CUSTOMERS ARE SAYING

The flexibility of ProcessFrame allows companies to adapt the solution to their processes, forms and language minimizing training time and to extend the usage to processes beyond those defined by the standards.

Microsoft Azure

Microsoft Azure is an open and flexible cloud platform that enables you to quickly build, deploy, scale, and manage applications across a global network of Microsoft data centers. You can build applications using multiple languages, tools, and frameworks.

KEY USE CASES

WEB APPLICATIONS

Build anything from lightweight websites to multi-tier cloud services that scale up as your traffic grows.

CLOUD STORAGE

Rely on geo-redundant cloud storage for backup, archiving, and disaster recovery.

BIG DATA & HPC

Get actionable insights from your data by taking advantage of a fully compatible enterprise-ready Hadoop service.

MOBILE

Accelerate your mobile app development by using a backend hosted in Microsoft Azure. Scale instantly as your install base grows.

MEDIA

Create, manage, and distribute media in the cloud – everything from encoding to content protection to streaming and analytics support.

FLEXIBLE APPLICATION MODEL

Microsoft Azure provides a rich set of application services, including SDKs, caching, messaging, and identity. You can write applications in .NET, PHP, Java, node.js, Python, Ruby, or using open REST protocols. This is all part of Microsoft's promise to let you build using any language, tool, or framework.

ALWAYS ON, ALWAYS HERE

Build resilient applications with automatic operating system and service updating, built-in network load balancing, and geo-redundant storage. Microsoft Azure also proudly delivers a 99.95% monthly SLA. You can rely on decades of experience in data center operations and trust that everything Microsoft Azure offers is backed by industry certifications for security and compliance.

DATA CENTER WITHOUT BOUNDARIES

Microsoft Azure makes it easy for you to integrate your on-premises IT environment with the public cloud. Migrate your virtual machines to Microsoft Azure without the need to convert them to a different format. Use the robust messaging and networking capabilities in Microsoft Azure to deliver hybrid solutions, and then manage your hybrid applications from a single console with Microsoft System Center.

GLOBAL REACH

With data centers around the globe, a massive investment in data center innovation, and a worldwide Content Delivery Network, you can build applications that provide the best experience for users, wherever they are.
