

Azure Sandbox as a Service: 10-week PoC

AUDIENCE	Cloud Administrator, Developers, Architects, Data Professionals
FORMAT	Hands-on Practice
LEVEL	All Level
PoC DESCRIPTION	<p>The Cloud Sandbox enables your organization to provide access to cloud subscriptions on-demand that are completely isolated from your production environment. It is a great service for implementing proof-of-concepts, dev-test environments or even hackathons.</p> <p>Opsgility Azure sandboxes provide your team with a self-service cloud environment. Using built-in capabilities for creating and deploying templates, they can quickly spin up complex multi-tier applications complete with complex network topologies to develop and test new features, to take snapshots of applications and databases and run multiple tests in parallel on replicated infrastructures.</p> <p>Partners create a significant number of proof of concepts (POC) deployments. Most POCs have a defined lifetime and known services. The Opsgility Cloud Sandbox provides the control you need to ensure that POCs do not unnecessarily use services that are not required, and do not live beyond their intended lifespan.</p> <p>Many Partners have solutions that consume a significant amount of resources when deployed in Azure. Leaving a demo environment up when it is not being used can significantly increase the cost of a new deal.</p> <p>The Opsgility Cloud Sandbox provides your team the ability to schedule the provisioning of an Azure subscription complete with all the features and services that your demo environment may require including your demo environment too.</p> <p>Imagine a sales call at 10 AM. Your sales team schedules the Sandbox to deploy your demo at 9AM and have it automatically removed at 5PM with no additional intervention from your team. This agility allows everyone to have their own demo environment while minimizing Azure costs and management overhead.</p> <p>The solution great for implementing proof-of-concepts, dev-test environments or hackathons, Host on-demand labs and webinars, sales demos, and a learning sandbox.</p> <p>Feature includes:</p> <ul style="list-style-type: none"> • Simplified subscription assignment • Pre-configured start environments (templates, policies) • Completely isolated from your environment • Time and budget constraints • Cost center-based reporting for billing • Support for Azure • Monthly invoicing (Pay-as-you-Go) • Simplified subscription assignment <p>*Price is for standard setup and up to \$7500 Azure consumption. Price is subject to change based on requirements, customization and Azure consumption.</p>
