CodeTwo Email Signatures for Office 365

Manage email signatures and disclaimers in Office 365 messages sent from any email client.

www.codetwo.com/email-signatures

In a nutshell

CodeTwo Email Signatures for Office 365 is an innovative cloud solution for central management of email signatures and disclaimers in Office 365. It lets you easily set up email signature rules for all or selected users and automatically add signatures and disclaimers to their messages, no matter what email client they use.

- Automatically add signatures to emails sent from any device (including mobiles)
- View server-side signatures in end users' Sent Items folders
- Preview signatures while composing an email in Outlook, Outlook for Mac and OWA
- Insert signatures under the latest reply/forward
- Personalize company-wide signatures by using Azure Active Directory data
- Use custom AD attributes like Initials, Pager, HomePhone and many more
- Easily add images, logos and marketing banners to signatures
- Add Office 365 user profile photos to email signatures
- Compose professional signature templates using an intuitive HTML editor
- Reliable and secure email processing within Microsoft datacenters and ISO 27001 certified Azure servers
- One-click CSAT surveys in signatures, email marketing and tracking campaign results
- Express deployment via automatic wizards
- Microsoft AppSource trusted app
- GDPR and PCI compliant

What experts say?

"I'm confident that administrators would be saved a great deal of configuration headaches if they used CodeTwo solutions."

- J. Peter Bruzzese (Microsoft MVP)

"As a Microsoft trainer, I never hesitate to recommend CodeTwo products while conducting sessions on Office 365."

- Kamil Baczyk (Microsoft MVP)

"CodeTwo are experts in their field and their Exchange and Outlook products are excellent - from the user's interface, right down to the engine."

- Diane Poremsky (Microsoft MVP)

"CodeTwo programmers are perfectionists who are passionate about what they do. That's all it takes to create products that every company wants."

- Emil Wasilewski (Microsoft MVP)

"CodeTwo tools are great because they simplify Exchange and Office 365 administration, but at the same time they let you do more than the Microsoft platforms allow natively."

- Konrad Sagala (Microsoft MVP)

"Extremely helpful, if you are looking for a quick and painless way of moving your users to Office 365."

- Ratish Nair (Microsoft MVP)

Email Signatures for Office 365

Centrally managed email signatures

Once you set up the program, email signatures and disclaimers are automatically added to emails according to the settings you choose. What's more, email signatures are added directly in the Cloud, on the server side, so there's no need to touch the client devices.

All email clients and mobile devices supported

The application stamps emails when they travel through the Cloud, so there are absolutely no limitations when it comes to email clients. The program can insert email signatures into messages sent from literally any device.

Logos, banners & social media buttons

Images, banners, social media buttons and other graphics are fully supported by the program and you can use them freely in your email signature templates. Not only this makes your emails look more professional, but also opens up new possibilities as far as email marketing is concerned.

Azure AD and user photo support

Azure AD Support:
Personalize your email signature designs by including dynamic Active Directory placeholders (both standard and custom AD attributes are supported). After a user sends an email, CodeTwo Email Signatures for Office 365 reads their information from Azure AD and inserts it into the email signature on the fly.

Office 365 users' photos in signatures:
With CodeTwo Email Signatures for Office 365, you can include Office 365 users' photos as part of email signatures.

Signatures in replies and forwards

Our advanced email signature positioning system can add email signatures to replies and forwards – not at the bottom of the correspondence.

Embedded graphics (no need to download pictures)

The program lets you embed graphical parts of your signature in email. This means that the recipient will always see a fully branded signature on every device, and without having to click "Download pictures". No more red Xs and paperclip icons.

Email Signatures for Office 365

One-click CSAT surveys

It is possible to automatically add personalized one-click customer satisfaction surveys to your email signatures – no matter what devices are used. This feature lets you precisely measure and analyze your customers' satisfaction, react accordingly and reward your team.

Email marketing & analytics

Use email signatures for marketing and track the results:
Send marketing communication to your customers in email footers and add URL tagging to links. Track the results of your campaigns in web analytics platforms, e.g. in Google Analytics.

Automate email marketing campaigns:
Plan email marketing campaigns ahead by using the Scheduler. This way every email marketing campaign you scheduled in the application will run automatically when the right time comes.

See signatures as you type & in Sent Items

See signatures while composing an email:
Our users can see their server-side Office 365 signatures while composing an email. This works with Outlook, Outlook for Mac and Outlook on the web (OWA). We are the first vendor in the world to provide this technology to the clients.

Email signatures in Sent Items:
You can enable the Sent Items Update to let your users see the signatures in the Sent Items folders on every device. Furthermore, the feature lets you easily ensure compliance with legal regulations. All this, without affecting the application's or Office 365's performance!

Easy to deploy and use

Express deployment:
All aspects of the setup, including the configuration of Exchange Online connectors, are guided by automatic wizards. All you need to do is authorize the process with your Office 365 global admin credentials and run the program's management console – no installs required!

Built-in HTML editor:
One of the most powerful CodeTwo Email Signatures for Office 365's features is the built-in WYSIWYG editor. HTML expert or not, you will be churning out professional HTML email signature templates like a pro.

Highly secure

Reliable and secure:
We ensure complete protection of your information - your emails are not stored or read by anyone, and your Office 365 credentials are safeguarded by OAuth 2.0. Furthermore, the program comes with 24/5 technical support and its performance is covered by 24/7 back-end support and monitoring.

Emails processed on ISO 27001 certified Microsoft Azure servers:
Our secure relay technology reroutes your emails through CodeTwo services hosted on ISO 27001 certified Microsoft Azure servers. Your emails never leave Microsoft datacenters during the process, and the operation is invisible to both the sender and the recipient.

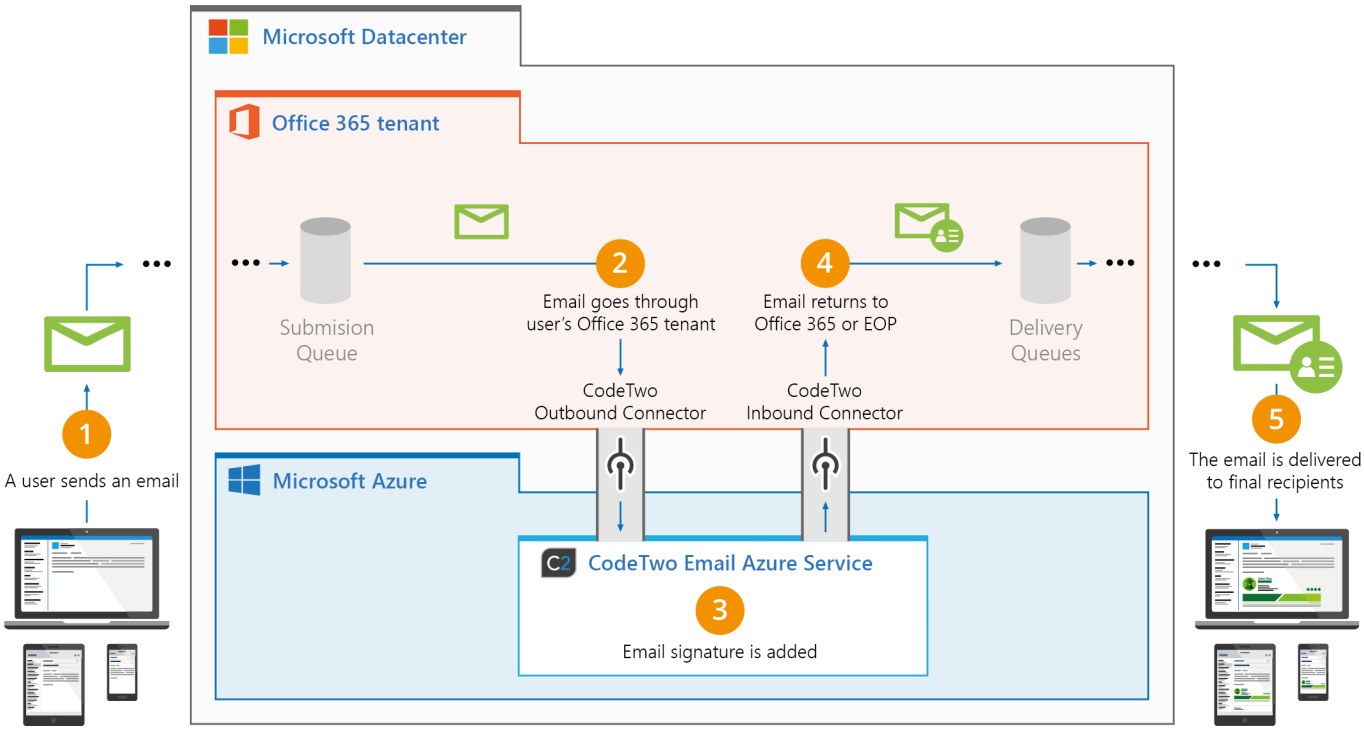
Compliance

Stay compliant with legal regulations:
Automated email signatures will help you stay compliant with various legal regulations and directives like GDPR, CASL, The Companies Regulations, Business and Professions Code, etc.

Multiple geolocations:
Your data (i.e. settings and AD cache) can be kept in a geolocation of your choice with a guarantee it will not be transferred anywhere else. We do not store your emails or anything else.

How it works

CodeTwo Email Signatures for Office 365 uses cloud services hosted on ISO/IEC 27001 certified Microsoft Azure servers to automatically add email signatures to your emails. The built-in wizard helps you reconfigure your Office 365 mail flow to safely relay your messages through CodeTwo Email Azure Services.



Reliability and security

Rest assured your emails are safe as they never leave Microsoft datacenters. Our product meets high security and reliability standards of business communication.

Powered by ISO 27001 certified Microsoft Azure

OAuth 2.0 protocol safeguards your credentials

Support for multi-factor authentication

TLS encryption and authentication

No external endpoints

Geolocation of your choice

Private storage for your settings

Your emails are not stored or read

Efficient load balancing and scalability

Unnoticeable delay

99.99% uptime

GDPR compliant
