

TRADERS TRUSTED NETWORK

Blockchain your Trades – Reimagining the International Trade

Challenges

Manual Processes

In-efficient collaboration

Leaky and risky country party validation processes

In order to do one trade there are over 200 documents involved

Different parties use different way to communicate in a disjointed way

Time and efforts spent in verification of manual documents and country party risks

Ideal Solution

Easy to use

Private and Secure

Provide a path for all parties to get digital

International Trade ecosystem is moving towards this

Traders if they don't adopt someone else would eat their lunch

Private network leveraging technology improves brand, reduces fraud

Desired Outcomes

To get started in 20 mins

Easy to use , Easy to add business partners

All required parties can participate securely and do their own part

Several traders are already using the solution

Banks are supporting digital trade process resulting in saving cost and time for trade finance

Leverage existing investment in technology and build a layer on top

Traders' Trusted Network

Digitalize your trades. Get Ahead Of The Competition.

.

End-to-End Trade Process

- Set up the Trade Business Process in 20 mins
- Set up Business Partners in Private fashion

Origin Visibility & Tracking

- Ability to record source information with authenticity
- Ability to Track the supply chain of the trade end –to-end

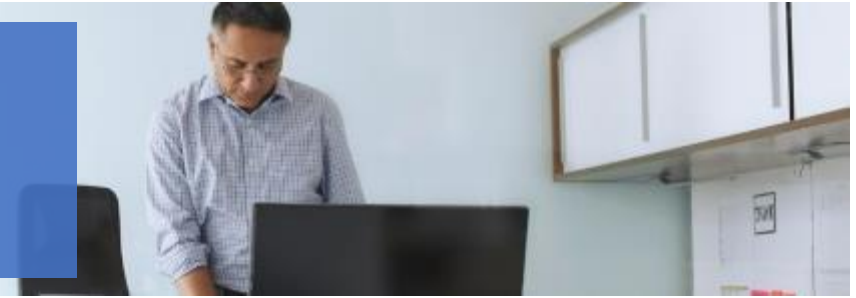

Digital Contracts, On time Payments

- Ability to do digital contract creation and execution and sign
- Ability to do on time payments based on obligations discharged
- Autonomous execution of payment based on contract key conditions fulfillment & trigger in blockchain

“We are so excited to use dltledgers for our trades. It transformed our trade process with complete integration to banks, shipping, insurance and customers so easily!”

-Vishal Vijay. Agropcorp International

Traders Trusted Network + Microsoft Azure

Traders Trusted Network combined with Microsoft Azure platform would deliver a solution with utmost security, reliability and scalability

Solution Alignment

Security

World best secured solution

Reliability

Microsoft Azure platform is proven with number of customers

Scalability

Solution would be able to scale horizontally and vertically with the consumption of the customer usage

Customer Success Story

“We are so excited to use dltledgers for our trades. It transformed our trade process with complete integration to banks, shipping, insurance and customers so easily!”

Vishal Vijay

Agrocorp International

Win Results

Leading The Era Of Digital Trade

Eg: Farmer → Processing unit → Trucking → Shipping → Agrocorp → Ultimate Buyer.

Blockchain based trade finance integrated to enable different bank nodes in blockchain for automated payments.

End-to-End Tracking

Business blockchain tracking @Agrocrop help identify the loopholes in the trade process and in-efficiencies across different parties in the trade supply chain.

Farmers at Source

Agrocorp have the ability to build differentiated networks authenticated source information in every trade it does, thus enhancing its digital capability in scaling. Source level tracking, Certifications, Sustainability and the quality of products are made available to the extended supply chain and end customers.

Customer Success Story

“We are excited at the opportunity of dltledgers platform, which can build networks; transform and build real time decisions into our supply side. We are already seeing results between our vendors.”

Gautam Kamdar

Senior Vice president, Supply Chain (EAJ)
Schneider Electric, East Asia Japan

Win Results

Leading The Era Of Digital Transformation

Digital transformation involves an inter-enterprise network of several parties working towards a unique customer demand. SE is able to achieve new level of digital transformation working with suppliers network to achieve visibility.

Digital Tracking With Authenticity

Business blockchain tracking @Agrocorp help identify the loopholes at SKU level tracking of inventory flow across the supply network including documents and certifications.

Supply Chain Reimagined

Autonomous self executing contracts streamlined across unrelated parties in the network deliver real time SupplySide visibility across unrelated parties. Blockchain enforceability algorithm in Platform enables enforceability of lead time commitments, build an on-time delivery pattern and save costs.
