

# SAVIYNT EXPRESS

## ANALYTICS-DRIVEN IDENTITY GOVERNANCE FOR AZURE ACTIVE DIRECTORY AND MICROSOFT IDENTITY MANAGER

### THE PATH TO NEXT-GENERATION IDENTITY GOVERNANCE

Working across on-premise and cloud environments creates new risks and opportunities for organizations. Saviynt Express for Microsoft customers offers one-click, ready-to-go compliance for identities managed in Azure AD or Microsoft Identity Manager.

Managing who has access to the resources needed for business in the era of digital transformation is quite an undertaking. The threat landscape and mandates such as GDPR require a mix of technologies to successfully compete in business today.

Saviynt Express is the only cloud-based solution to offer deep integration with Azure AD and Microsoft Identity Manager so you can blend powerful provisioning and compliance capabilities in one click. Analytics-driven, Saviynt Express makes compliance simple by enhancing Azure AD and Microsoft Identity Manager capabilities. With Saviynt Express, you can identify and remediate access risks and provide deeper provisioning integration to enterprise and cloud applications using a modular plug-n-play Identity governance and administration platform.

### SAVIYNT EXPRESS FEATURES:

- Enforce and manage consistent security policies and compliance controls across Hybrid IT environments
- Empower end users with 'business ready' tools that grant access to the resources they need
- Enable managers to review access continuously with the help of integrated risk analytics and event based certifications
- Automate identity lifecycle management for cloud and enterprise applications with out-of-box integration with Microsoft Identity Manager
- Establish last mile provisioning for critical EHR and financial applications

## SAVIYNT EXPRESS OFFERING

With several hundred enterprise and SaaS application integrations, you can monitor identity and access controls using a framework that spans identities, applications and infrastructure - whether cloud or on-prem. The system-wide dashboard gives you the power to easily analyze trends against historical control violations and set up automatic alerts for compliance control owners.

## PREMIUM FEATURES

### IDENTITY ACCESS GOVERNANCE

- Discover, design and manage roles and rules
- Manage delegated administration of users with integrated audit and traceability
- Leverage risk profiling as a trigger for adaptive authentication
- Policy and Group Management

### APPLICATION ACCESS GOVERNANCE

- Application-deep separation of duties management
- Usage analytics and transaction monitoring
- Role and privilege access design, mining and governance
- Continuous controls monitoring

### INFRASTRUCTURE ACCESS GOVERNANCE

- Robust controls library for visibility and actionable remediation
- Near real-time workload security policy enforcement
- Integration tools to enable DevOps with less risk
- Privileged account and management and monitoring
