# raffle.ai

# AI search tool for business

giving you direct access to company knowledge and data .

ask a question

Companies are faced with a problem. As Data grows exponentially and becomes more complex, it is harder to navigate. HBR and McKinsey found that between 20-25% of a work day is wasted on searching for documents and company information.

## Solution

raffle is a plug'n'play AI search tool for businesses navigating all company data by using deep learning, so that employees can search company knowledge in normal text or voice without remembering keywords or exact names and titles.

### Access all data from one place regardless of where the content resides

raffle navigates all your company systems and sources the information into a unified UI. Systems include all Dynamic 365 and applications with public APIs

### No need to structure data

raffle will find the correct snippet of the document no matter where it is stored or how it is called. You don't need to index or clean your data.

### Cloud based self-learning AI

raffle technology is based on advanced deep learning and understanding. The models are improving while your employees use it, thus constantly improving the relevance of your search.

*"raffle.ai uses the latest algorithms, technology and knowledge on AI and Machine Learning. From the outset, they have been willing to enter into a partnership that suits our wishes and organization. Their expertise and cooperative approach is the reason why HK Lab chose raffle.ai to solve this complex task."*

## Why raffle?

raffle.ai is transforming the work place by pushing the frontiers of AI so that employees can become smarter and focus on what they are best at.

raffle is a unique solution because it is based on deep learning and understanding, resulting in no need to use keywords of phrases. Thanks to transforming words into vectors raffle is easily scalable and completely agnostic of industry and language. Our technology can process huge amounts of data and make it easily accessible to employees via a seamless user interface. The technology that raffle is based on is state of the art, leveraging the newest developments in machine learning. Combined with the sophisticated security on Azure cloud services, raffle is the best product on the market.

### Plug-in
raffle plugs into your systems

### Access
Employees get immediate answers to their questions
