TIBCO Cloud™ Mashery®

The cloud-native API platform for event-driven digital business

Enterprise services must to be reusable, adaptable, and interconnected. APIs are the standard, scalable interfaces that enable the enterprise to expose, secure, and connect disparate service in a manageable way. API-led integration and application development is a best practice developing enterprise services at scale.

TIBCO Cloud™ Mashery®

A full-featured API platform to address the needs of the API developer and Enterprise Architect from API creation, testing, publishing, security, and performance management.

Business Outcomes

This at-a-glance box

- Scalable internal API Programs

- New Revenue Streams via Partner and Public APIs

- Greater enterprise connectivity

- Improved security of data & services

- Value measurement of services and APIs via analytics

Full Lifecycle API Management

- Manage APIs from creation, to publishing, to performance measurement

- Ensure end-to-end governance of your internal or external API program of developers and users

Manage APIs across the Full Lifecycle

App Development & Integration

- API-led Integration to deliver enterprise connectivity, agility, and scale

- Develop, discover, and connect cloud-native and event-driven microservices

Develop and connect cloud-native apps

Deployment Flexibility

- Native deployment to Kubernetes for full control in your Azure environment

- Manage your API traffic endpoints in your controlled environment

Deploy Mashery anywhere, manage APIs from everywhere

"The strategy and partnership with TIBCO was to create a platform and a place where analysts could get data they could use to derive intelligence, and have consistent information across all of our channels. We set up a real-time data and integration platform using TIBCO technologies, so we have real-time flight and passenger information."

- Andi Azzolina, Director of Shared Development Services, jetBlue
