

Collabspace Transforms Information Governance in the Cloud

Take advantage of the most expansive search available today that finds content across multiple platforms including Microsoft SharePoint, Exchange, One Drive and more.

- Employ automation to reduce redundant and manual effort.
- Implement content security measures that protect from data breach and ransomware attacks.
- Achieve peace of mind knowing regulatory and legal requirements are being met.

Manage GDPR & FOI Requests in a Flash

Gone are days of wondering if you've compiled all the documents you need. With machine learning and the deepest and most expansive search capability available in the market today, Collabspace finds what you're looking for in a fraction of the time and can export it the way you need to.

- Freedom of Information and GDPR requests are streamlined and completed with accuracy.
- Dig deeper and take advantage of Optical Character Recognition to find relevant content in images, PDFs and audio/video transcriptions.
- Automatically detect duplicates and easily export files individually or in bulk.

Prevent and Recover from Data Breach or Ransomware Attack

In the last year, 35% of enterprises were hit by a ransomware attack with more than half of those having to completely cease operations to combat it and 45% not retrieving any data back even after paying the ransom.

- Archive enterprise content using fortified Collabspace WORM Storage (Write Once Read Many).
- Secure permission-based access, encryption, immutable activity logs, audits and more.
- In the event of a ransomware attack or data breach of local storage, Collabspace recovery is virtually instant.
- Maintain productivity with downtime and avoid costly measures for system repair.

Multi-Platform Search & Archive

Multiple Content Sources? We've got the connectors to get rooted in all of them.

Collabspace Features

Your content re-imagined. Now easily searchable, secure, and available on any device.

Unified Search

Search and compile all your files anytime, from any device into one view with advanced filtering for accuracy.

Search Images and PDF with OCR

Automatic OCR (optical character recognition) and text extraction from traditionally non-text-searchable documents.

Security Built In

Be ransomware-proof with WORM Storage protection to ensure files are not modified and cannot be tampered with.

Multi-Lingual

Search and find in both English and French.

Multi-Platform Search

Search SharePoint Online, Exchange Online and OneDrive with more to come.

Compliant Archive & Back up

We store your inactive documents to free up your space but they are always available and searchable.

Export in Bulk

Easily export content for e-discovery, FOI, NARA and GDPR processing.

Multi-jurisdictional

Achieve data residency and sovereignty compliance.

Search Audio & Video Transcriptions

Go beyond titles and metadata.
