

# object theory

## About Object Theory

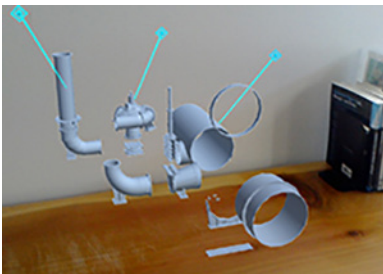

Object Theory is a full service mixed reality experience agency based in Portland, OR. They provide end-to-end services for enterprise clients from envisioning through delivery, with a focus on strategy, user experience, and development.

## Prism by Object Theory

**Prism by Object Theory** is a HoloLens application that allows participants anywhere in the world to have a shared experience with three dimensional objects and environments in true 3D. It is available for download on the Windows Store.

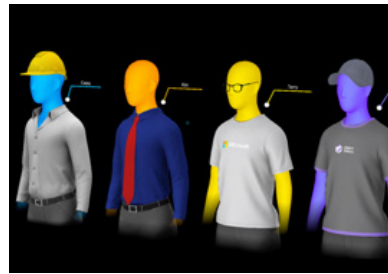

Prism is powered by the **Object Theory Mixed Reality Collaboration Service**, which helps organizations design and build holographic shared experiences. It includes the ability to customize avatars, display 3D models at table top and true scale sizes, audio chat with spatial sound, and create holographic annotations. This service helps organizations improve communication with efficient viewing and discussion of 3D models, regardless of the participant's location.

If you are interested in the commercial version of Prism or have more questions, please email [prism@objecttheory.com](mailto:prism@objecttheory.com).

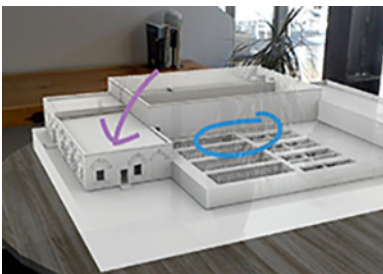

### Annotations

Add text, drawing, and voice annotations that can be attached in 3D space.

### Customized avatars

Represent participants in physical space by full-sized avatars that are uniquely differentiated, with support for gaze, gesture, and voice interaction.

### Display of 3D models

Import and display 3D content at any size, from tabletop to true-scale for shared review and discussion, with the ability to navigate to points of interest in full scale models.

### True-scale mode

Visualize the model at 1:1 scale and navigate around and within it.

### Spatial audio chat

Hear which person is speaking to you by the direction of the audio. Networked-based audio chat system with HRTF 3D directional audio.

### Multi-platform

Support for Microsoft HoloLens, Windows Mixed Reality Immersive Headsets, and Windows 10 PCs all connecting in a shared experience.
