

Business Network

Enabling 100% digital Purchase-to-Pay

OpusCapita Business Network services integrate buyers, suppliers and other business partners through the OpusCapita Business Network. Through the network you can automate sending and receiving all types of electronic business documents, including e-invoices globally. Paper/pdf invoices are also digitized and merged into one common flow.

With OpusCapita Business Network, you can dramatically reduce the process cost associated with manual handling of business documents. Digital communication also drives control, compliance, visibility and enables information-based decision making.

A single connection to a global business network

The OpusCapita Business Network connects and integrates buyers, suppliers and other business partners much wider than any single network.

With a single connection, your com-

pany can reach hundreds of thousands of potential business partners to exchange everything from purchase orders to invoices in various formats such as XML, EDIFACT or pdf.

Compliance ensured

The connection will ensure that your company is compliant with local laws on invoicing. All the data can be logged for auditing and used for further analysis, for example fraud detection. The exchanged information is also validated according to business rules to enable end-to-end purchase-to-pay and order-to-cash automation.

Key features

- Single connection to the OpusCapita Business Network with data validation, conversion and transfer
- High data security and identification on the network

Make OpusCapita your Business Network

Receive 100% of your invoices electronically

OpusCapita has been digitizing and automating invoice flows since 1985. The result is an extremely fast process for pure e-invoice receiving. The core of the process is proactive supplier onboarding. The remaining paper invoices or email attachments are digitized, validated and converted into electronic format, regardless of the invoice type. All the invoice data is then transferred in a predefined way via one connection to the Customer's business system for further processing. OpusCapita technologies and know-how even enables scan & capture of invoice details on line (item) level.

Combined integration brings true value

The value of using one provider for external integration is that all data can be logged and analyzed for cost optimization, patterns, quality deviations and fraud detection.

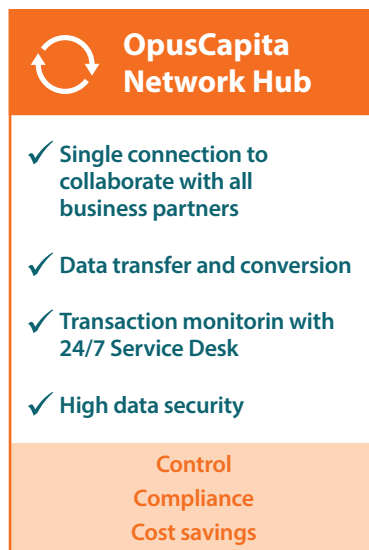

In a nutshell

OpusCapita B2B Connectivity services drives organizations towards 100% digital purchase-to-pay. On a way to true integration, effective tools such as digitizing and portals are used during the transition period.
