ECM AND TCM

Electronic Case Management (ECM) is a comprehensive, real-time health services information system for client care, client monitoring, perpetual time study, NFP reporting, TCM billing and more.

ECM captures extensive demographic information, automates documentation and reporting, and ensures centralized and consistent delivery of services.

ECM streamlines the use and reporting of information for public health nurses and referral organizations. ECM links consultation appointments, referrals, and follow-up reminders to determine if services were rendered and met client needs. It grants users the ability to complete and track assessments and notes, plus develop, schedule and follow-up on service plans.

Targeted Case Management (TCM) increases compliance, reduces billing errors, and drives revenue, with clear documentation steps and a simple data entry process. It improves compliance with built-in alerts, reminders and comprehensive reports.

NFP

Persimmony is a Preferred Partner of **Nurse-Family Partnership (NFP)**

MAA

Medi-Cal Administrative Activities (MAA) is a comprehensive, paperless, real-time solution for monitoring, storing and reporting employee time records. It eliminates the need for paper spreadsheets. MAA is a secure online time study.

Persimmony software provides supervisors and staff with seamless oversight of work-related time and tasks. It eliminates the need for separate work/task tracking methods.

REFERRALS

Our **Referral** portal empowers your partner agencies to submit referrals in real time. It assures data quality and completeness of referral information for timely response.

This expedites review for eligibility, service initiation and staff assignment. It augments ECM for seamless transmittal of confidential information.
