

# PowerON Pulse DMS (Device Management & Security)

PowerON Pulse DMS increases workforce productivity & agility, whilst improving security & compliance for organisations of all sizes.

The security & mobility needs of the modern workplace are shifting; workforce productivity and cyber security are top priorities for many organisations. Cloud-based solutions now form an integral part of IT service delivery, allowing companies to step outside of traditional boundaries. Combining world-class security and agility is a core requirement for next generation businesses.

## What is Pulse DMS?

Pulse DMS is an Azure-cloud service providing enterprise device management & security capabilities using Microsoft Configuration Manager (ConfigMgr) technology. Pulse DMS provides Operating System (OS) deployment and security patching capabilities with zero on-premise infrastructure. Secure and protect your business from the cloud with Pulse DMS.

## Why Pulse DMS?

- Improve security patching
- Improve Workforce Productivity
- Increase compliance & policy management
- Reduce infrastructure cost & complexity
- Improve end user support experience

### Secure

Increase cyber threat protection & compliance
