

# SharePoint Monitoring

## END-TO-END MONITORING FOR SHAREPOINT ONLINE, 2013 & 2016

## Monitoring SharePoint is Required

If your organization utilizes SharePoint for content, communication and collaboration then **you must continuously test and monitor your SharePoint installations**. Whether its SharePoint Online in Office 365, Hosted SharePoint on Azure or your own SharePoint 2016 installation, synthetic uptime and performance monitoring will help you find and fix problems, detect changes and plan your network and servers for capacity.

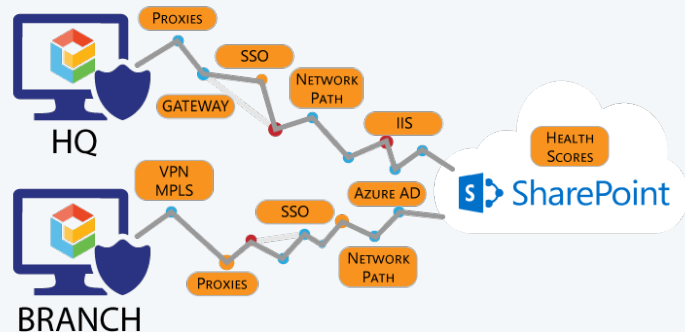

CloudReady® Monitoring for SharePoint is the only solution that **requires no scripting, tests across the different servers without instrumentation and there are no servers to setup, no databases to maintain**. CloudReady SharePoint Monitoring monitors all of the crucial ADFS or Single Sign-On servers (SSO), CDNs and Web Parts that comprise an entire installation giving you the network intelligence to see problems before they impact your business.

CloudReady **deploys in minutes** for monitoring SharePoint from all your vantage points; branch offices, HQs, WAN, WiFi, MPLS or out on Exoprise maintained Public Sites distributed throughout the world. Exoprise has your SharePoint covered!

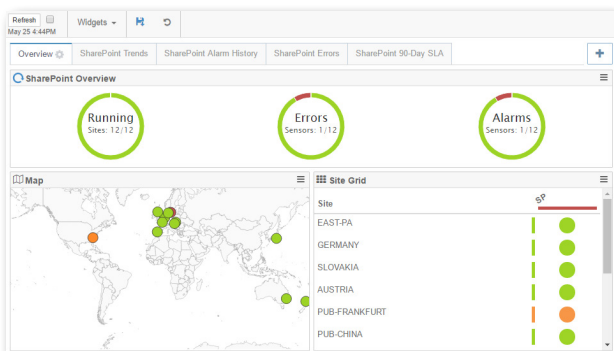

## See Across Servers and Systems — No Changes or Instrumentation Required

### End-to-End SharePoint Intelligence

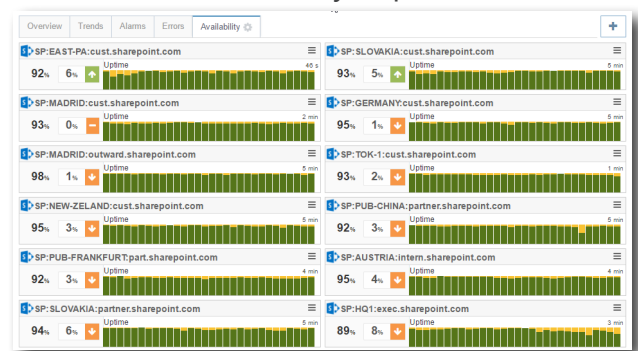

- Continuously measure and test end-to-end
- Quickly deploy to any branch or office
- Monitor proxies, gateways, Single Sign-On (SSO) and **everything in between**
- Hop-by-hop Network Path Performance gives you the visibility to pinpoint the bottlenecks
- Know about SharePoint Online problems before Microsoft does

### Custom Dashboards for All the Teams

### Service Level Availability Reports

## Enterprise Use Cases

### Plan Your Deployment

Your network, proxy and SSO needs always change. Test your SharePoint capacity and optimize your network configuration before and after changes.

### Proactively Monitor End-to-end

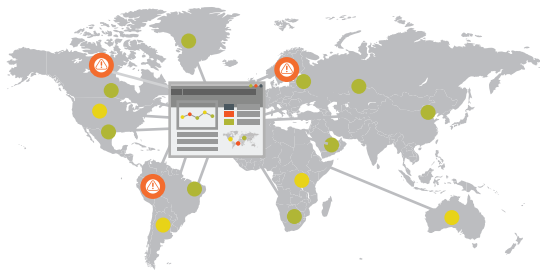

Know about problems before they impact your users. Find out even before Microsoft does and react quickly with deep diagnostics.

### Troubleshoot Issues Anywhere

CloudReady is instantly deployed to any branch office or network scenario. CloudReady runs alongside any workload, any Windows® device or VM.

### Benchmark Your Performance

Crowd Data Analytics™ enable you to see how your SharePoint installations compares to others. Find out if the problem is yours, the ISPs, or the providers in real-time.

### Crowd Data Analytics

Cloud services like Office 365 are delivered globally to millions of users. CloudReady harnesses the power of the crowd by enabling you to benchmark your SharePoint metrics against crowd averages to quickly determine if issues are local, in the network, or in the cloud.

- Benchmark performance with other Office 365 customers around the globe
- Quickly isolate the location of any service disruption
- Speed time to resolution; avoid unnecessary support calls

### High Level Actions, Low-level Metrics

CloudReady SharePoint sensors execute synchronized user actions maintained by Exoprise for accurate baselines across customer and locations. High level actions such as Login, Upload and Download are captured alongside low-level metrics like Federated Login Time, Time-to-First-Byte (TTFB) and SharePoint Health Scores.
