

Capture The Insurance Market

Build and Operate Powerful E2E Insurance Products in Weeks

FintechOS is an insurance technology as a service platform for enterprise insurance companies needing to drive growth and accelerate digital transformation. Competition, especially from disruptive market entrants, has caused the insurance industry to fundamentally rethink sources of revenue, efficiency and the role technology plays in meeting customer need.

What is FintechOS

FintechOS's proprietary self-service framework allows teams to develop and operate E2E insurance products built on custom data models that constantly evolve through each application's lifecycle. The only platform in the market to offer insurance companies access to AI, process automation, customer 360, payment gateways, identity authentication and document management on one platform.

Why customers use FintechOS

- Trusted by top Insurance Companies and Tier 1 European Banks to accelerate digital transformation.
- Client portfolio includes ERSTE, Vienna Insurance Group, Orange Money, Hyperion Insurance Group, TBI Bank, NN/Idea Bank.
- Strategic partnerships with KPMG, CapGemini and Soprasteria.
- 12 years of experience developing fintech solutions.
- Advanced technology made available for non-developer teams for the first time.

Why FintechOS?

FintechOS provides enterprise insurance companies an unfair advantage to develop products and services quicker than traditional competitors and compete with agile, disruptive market entrants. Allowing no-technical teams to create, test, deploy and operate powerful data-driven applications will change the way enterprise achieves its digital transformation goals.
