Launchpad365
By Clevir Solutions

Eliminate the desktop;
use any browser to launch all your applications

# Embrace digital transformation.
Move away from the desktop and into the cloud.

Launchpad 365 enables end-users to launch all their apps from any browser on any device. The next generation workspace that enhances productivity and end-user experience. Our solution enables you to shed much of your infrastructure by moving your applications to a browser, for those that are not compatible, we keep what you have and truly bridge both worlds. We guarantee simple, flexible and easy access to all your applications from any device and from anywhere.

Improve productivity

Launchpad 365 truly enables you to improve productivity. Through Single Sign On you get access to all your applications from any browser on any device. Easily integrate Office 365, UC apps and any of the other 10,000+ cloud applications. Our Live tiles provide you with real time notifications. You can Bring Your Own Identity, meaning that if a company recognizes you as an authorized user, they can securely grant access to multiple applications at once.

Access to all your applications

Eventually we will all make that move to the cloud. But in the meantime you want to work with what you have as well as all the cloud applications you already adopted. With Launchpad 365 you can add our Enterprise option for RDP translation to HTML and integrate your legacy applications, your VDI and your Terminal Server served applications with all your cloud applications.

Enhanced security

Move away from data on endpoints and desktop management, enhance security with Isolated Browser as a Service to access the internet in a container and separate from highly classified end-user desktops and networks. Launchpad 365 removes the fear of data loss; Single Sign On features with multiple authentication features and our token option reduces risks even further.
